STAR App User Handbook

A practical guide to getting started and using STAR for individuals, group administrators, direct support staff, caregivers, and case managers.

Start with onboarding — then follow your role

- PART 1 | Getting started: create an account, confirm email, create or join a group, share the invitation, complete Profile, and learn navigation.
- PART 2 | Group administrators: set up the team, check caregiver assignments, manage ISA outcomes, and review information.
- PART 3 | Direct support staff and caregivers: document shifts, supports and locations; complete check-ins; use reports, messages and Moments.
- PART 4 | Case managers: verify access, prepare for reviews, review ISA progress, and coordinate follow-up.
- PART 5 | The individual and supporters: use My STAR to communicate, share preferences, and review experiences.
- PART 6 | Shared tools: How I Communicate and Understanding My Support Needs, with illustrated instructions for individuals and their teams.
- PART 7 | References, troubleshooting, and a prioritized list of screenshots still needed.

Which path should I take?

Creating a brand-new team? Follow Steps 1–3, then the Administrator section. Invite everyone else with the group code.

Joining an existing team? Follow Step 1, then Step 4, Step 6, and your own role section. Individuals have an additional illustrated setup page.

Already using STAR? Skip onboarding and go to the section for the work you are doing today.

> Important: This is a working handbook. Screens marked SCREENSHOT NEEDED are awaiting confirmation. STAR TEST and live STAR are separate environments; use the correct link and do not use real personal data in test accounts.

Table of Contents

PART 1 — GETTING STARTED

- Create and confirm your account
- Create your team group
- Share your group invitation
- Join an existing team group
- Set up the individual account
- Complete your profile

- How to navigate STAR

PART 2 — ADMINISTRATORS

- First administrator session
- Set up and maintain the team
- Manage ISA outcomes and reviews
- Weekly and monthly review

PART 3 — CAREGIVERS & DSPs

- First caregiver session
- Complete a daily check-in
- Record support provided and location
- Review reports and team tools
- Find resources and instructions

PART 4 — CASE MANAGERS

- Get access and prepare a review
- Review ISA progress and follow up

PART 5 — INDIVIDUALS / MY STAR

- Welcome and first-time setup
- Daily use: How I Feel and My Day
- Help Now and Something Hurts
- Read Aloud and microphone
- Moments, photos and communication

PART 6 — COMMUNICATION AND SUPPORT PREPARATION

- Find both tools and support participation
- How I Communicate: answers, guidance, observations and orientation
- Understanding My Support Needs: questions, concerns and linked records
- Review and export a preparation packet; save and access help

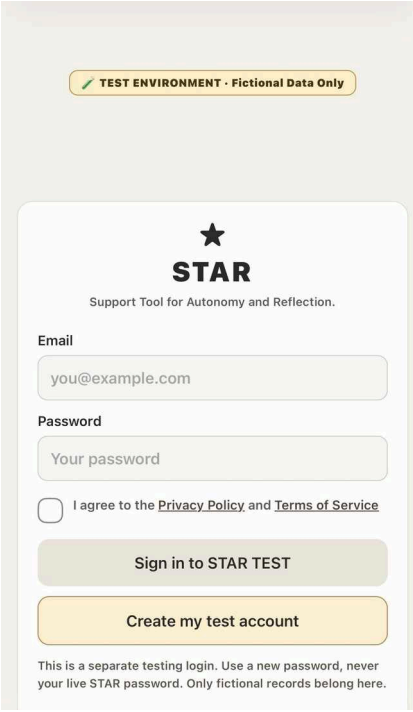

PART 7 — REFERENCE

- Resources and troubleshooting
- Screenshots still needed

DRAFT

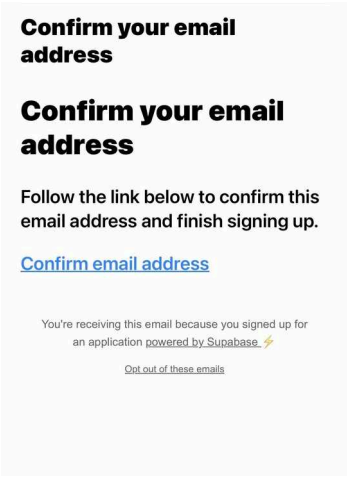

Step 1 | Create and confirm your account

Everyone starts here. Create a login and verify the email address before choosing a role or setting up a team. The screenshots show STAR TEST; the live app has a separate sign-in system.

1. Open STAR and tap Email. Enter an address whose inbox you can open. Tap Password and enter the password you want to use.
2. Open and read the Privacy Policy and Terms of Service. Check the agreement box if you agree.
3. In STAR TEST, tap Create my test account. Use a new password for this separate testing account.
4. When STAR tells you to check your email, open that inbox. Open the confirmation email and tap Confirm email address.
5. Return to the same STAR address. Enter that email and password, check the agreement box, and tap Sign in to STAR TEST.
6. On Choose Your Role, select I am a Caregiver or I am an Individual. Continue with the instructions on the next two pages.

Confirm the email address

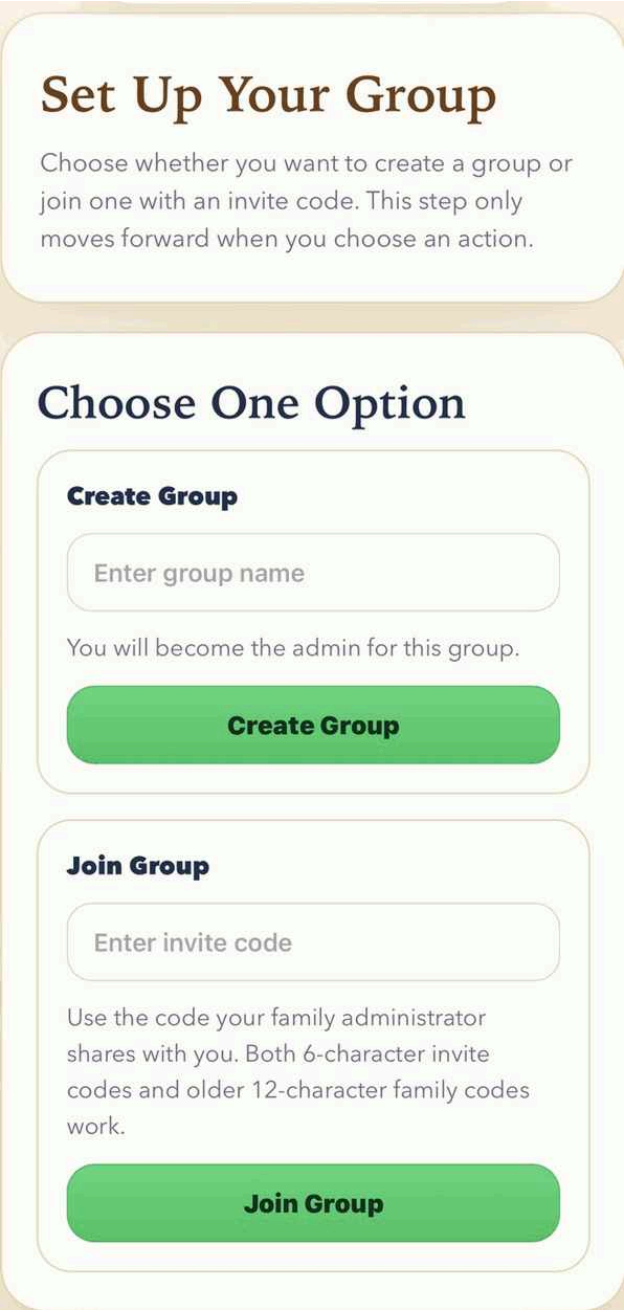

If the confirmation email is missing, check Spam or Junk and confirm the address you entered. If STAR says the account already exists, use the sign-in option.

Step 2 | Create your team group (administrator)

Only the person starting a new team group should follow this page. First create your own account and confirm your email. On Choose Your Role, tap I am a Caregiver; creating the group makes you its administrator.

Create the team group

1. On Set Up Your Group, find Create Group. Tap Enter group name and type a name the team will recognize.

2. Tap Create Group. The screen says you will become the admin for this group.

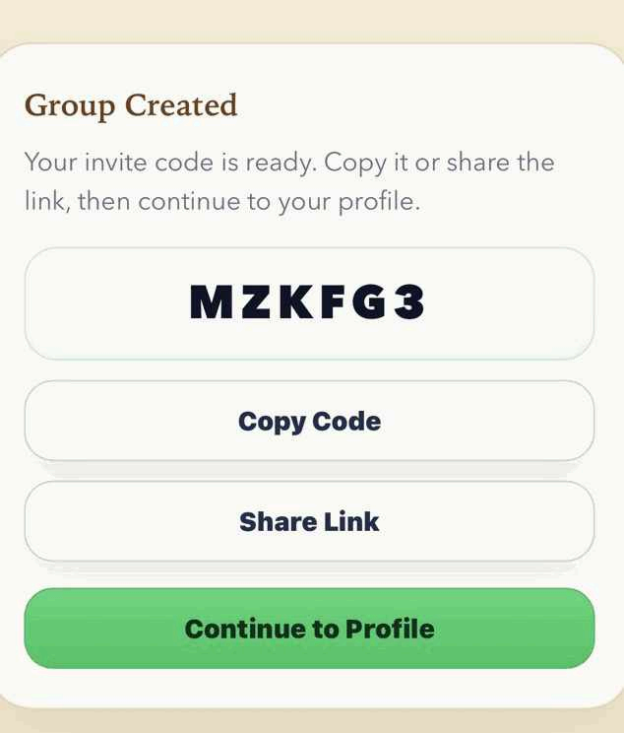

3. Under Group Created, find the invite code. Tap Copy Code and keep it ready to give to the caregivers and individual who should join.

4. Tap Continue to Profile. Follow the setup screens. On Profile, enter your own Display Name, choose the correct Default Group, review the agreement, and tap Save Profile.

5. Complete the caregiver setup screens and confirm that the correct individual and team group are shown before entering records.

What to look for on the group page

Screenshot captured from STAR UVM Testing. Joining requires an invitation code from the group administrator.

Create Group	Join Group
Enter group name	Enter invite code
Create Group	Join Group

Group page guide using the app's field and button labels. Caregivers see both options. Individuals see the Join Group option.

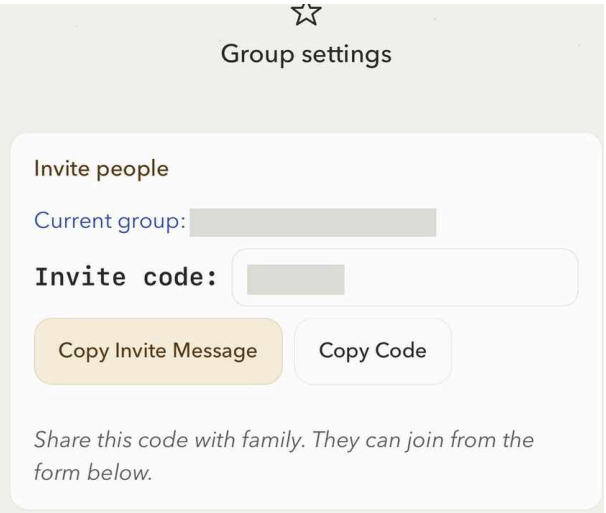

Help another caregiver join

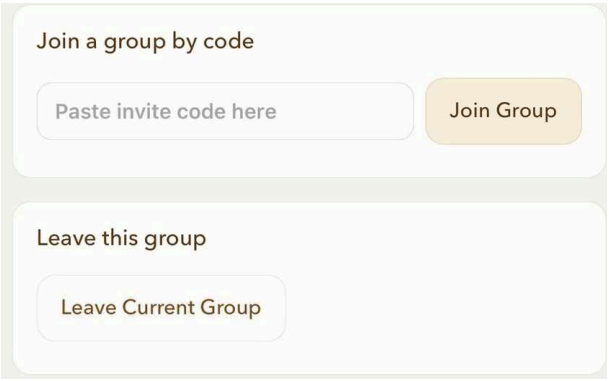

Ask the caregiver to create and confirm their own account, choose I am a Caregiver, enter your invite code under Join Group, and tap Join Group. They then complete their own Profile. Confirm their name appears in the team before assigning their check-in questions.

Share the invite code shown by STAR. The current group page accepts 6-character invite codes and older 12-character family codes. Copy the full code into Enter invite code.

Step 3 | Share your group invitation

After creating your group, open Menu, then Settings & Admin to reach Group Settings. Confirm the correct group, then copy the invitation you will share with each team member.

1. Invite someone. If your role allows it, tap Copy Invite Message or Copy Code. Share the invitation directly with the person who should join.

2. Join a group. Under Join a group by code, paste the invite code you received and tap Join Group. Check Profile if you want to set the joined group as your default.

3. Leave a group. Use Leave Current Group only when you intend to leave the group shown in Group Settings.

SCREENSHOT TIP: This page already includes a Group Settings screenshot. If sharing controls differ in live STAR, send the current full screen.

Step 4 | Join an existing team group

A team member should join the existing group rather than create a second group. The administrator sends the invite code or invitation message first.

For a direct support professional or caregiver

1. Open the STAR link sent by the administrator. Create your own login, verify the email, and sign back in.

2. On Choose Your Role, choose I am a Caregiver. On Set Up Your Group, find Join Group rather than Create Group.

3. Paste the complete code into Enter invite code and tap Join Group. Read the group name in the confirmation.

4. Continue to Profile. Set the display name people should recognize, confirm Default Group, and tap Save Profile.

5. Open Home, check that you see the correct group and individual, then ask the admin to confirm your caregiver check-in assignment.

For an invited case manager

Ask the group administrator which login path and level of access your STAR environment supports before selecting a role. A dedicated case-manager sign-up choice has not yet been verified in the screenshots. Use the invitation provided by the administrator and confirm that the correct group and only authorized records are visible.

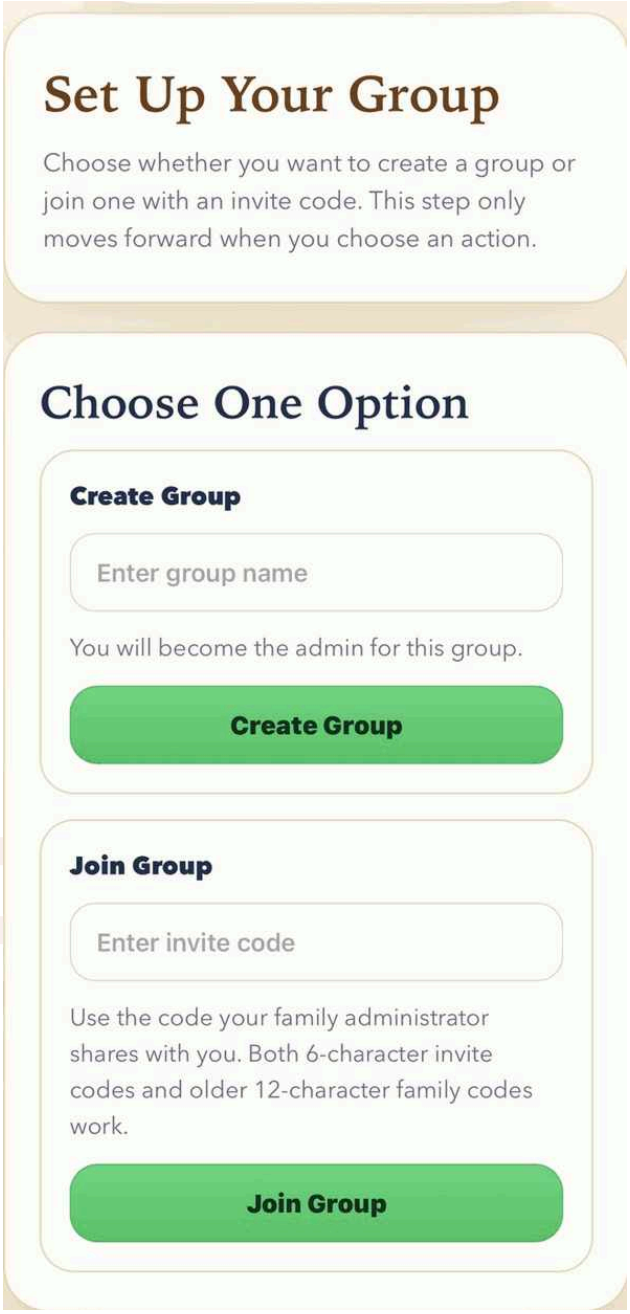

For the individual

Choose I am an Individual after creating the separate login, then use Join Group with the administrator's code. The next onboarding page gives the full individual setup procedure.

Screenshot captured from STAR UVM Testing. Joining requires an invitation code from the group administrator.

DRAFT

Screenshot captured from STAR UVM Testing. Joining requires an invitation code from the group administrator.

Step 5 | Set up the individual account

An individual uses a separate login and joins the existing group with its invite code. A support person may help, while respecting the individual's choices about name, picture, and whether to use My STAR.

Create the individual login

1. Have the team's invite code ready. Use an email address available for the individual's separate account and make sure the individual or person helping can open that inbox.

2. Open STAR in a separate browser profile or sign out of the admin account. Follow Create and confirm your account. Enter the email and password intended for the individual's login.

3. Open the confirmation email, tap Confirm email address, return to STAR, and sign in with the individual's account.

4. On Choose Your Role, tap I am an Individual.

5. On Set Up Your Group, tap Enter invite code under Join Group. Paste or type the code the admin copied. Tap Join Group.

6. Check the group name in the success message. On Profile, replace any email address in Display Name with the person's preferred name. Check Default Group, add a picture if desired, review the agreement, and tap Save Profile.

7. Check that My STAR opens for the correct person and group. Show the person How I Feel, My Day, and Back to My STAR. Offer time to explore and let them stop or skip.

If an extra email address is unavailable

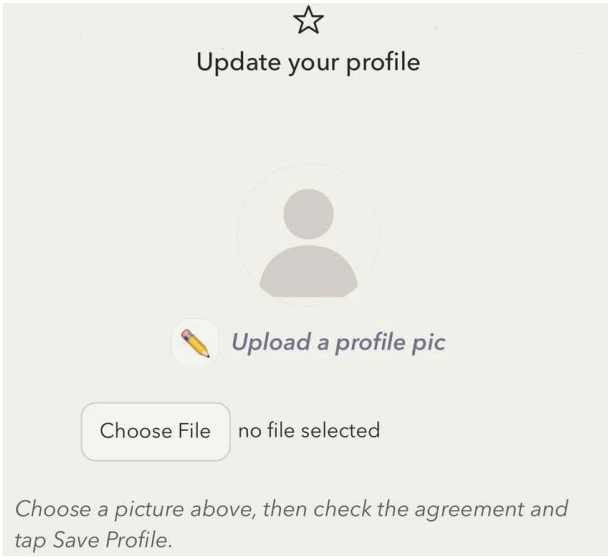

A separate login needs an email address available for that account and access to its confirmation email. Arrange that address before starting the individual's sign-up. The individual profile and the login used to open My STAR both need to refer to the same person.

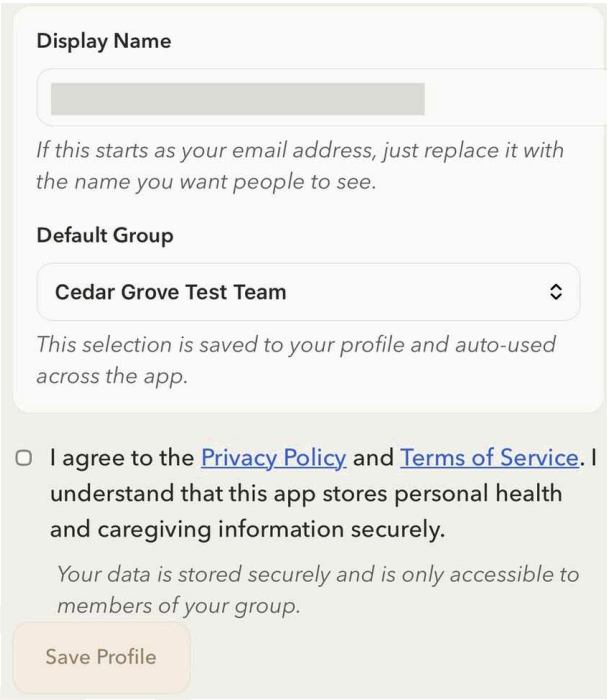

If joining does not work

Ask the admin to copy the invite code again and check that both people are using the same STAR environment. Paste the complete code into Enter invite code and tap Join Group. If the wrong name or group appears, ask the admin to check the account and individual connection before saving personal entries.

Step 6 | Complete your profile

Open Menu, then Profile. Your display name is the name other people see. Default Group tells STAR which group to use across the app.

DRAFT

1. Choose a picture. Under Upload a profile pic, tap Choose File and select a picture if you want to add or change it.

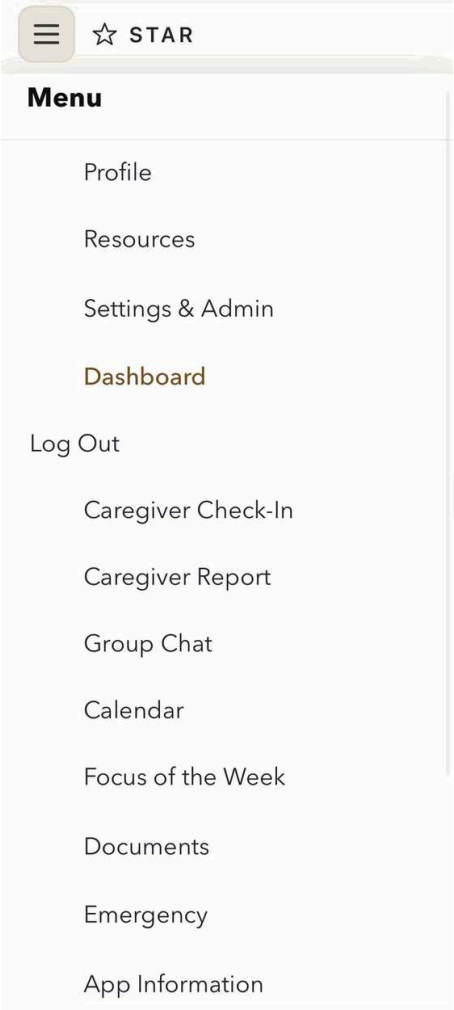

2. Check your name and group. Enter your preferred Display Name. If you belong to more than one group, choose the one you want STAR to open by default.

3. Review and save. Read the Privacy Policy and Terms of Service, check the agreement if you agree, then tap Save Profile.

How to navigate STAR

On the caregiver and admin side, use the bottom bar for everyday tools. Tap the three-line button at the upper left to open the full Menu.

1. **Home** Return to the dashboard and Quick Actions.
2. **Check-in** Record how the individual's day went.
3. **Reports** Review check-in summaries and trends.
4. **Calendar** See scheduled group events.
5. **Focus** Open Focus of the Week.
6. **Docs** Find documents and the Resources card.
7. **Chat** Open Group Chat for your active group.

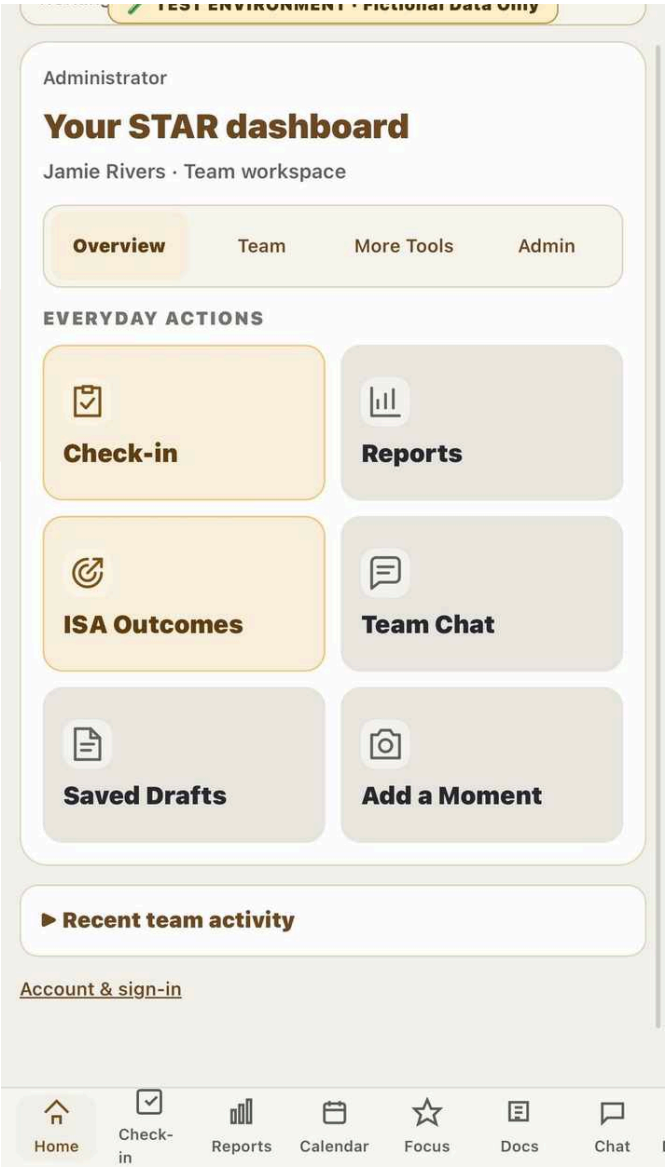

Use the full Menu for Profile, Resources, Settings & Admin, Emergency, App Information, and Log Out. Scroll inside the menu to see more links. Dashboard is the menu name for Home.

Caregiver & admin dashboard

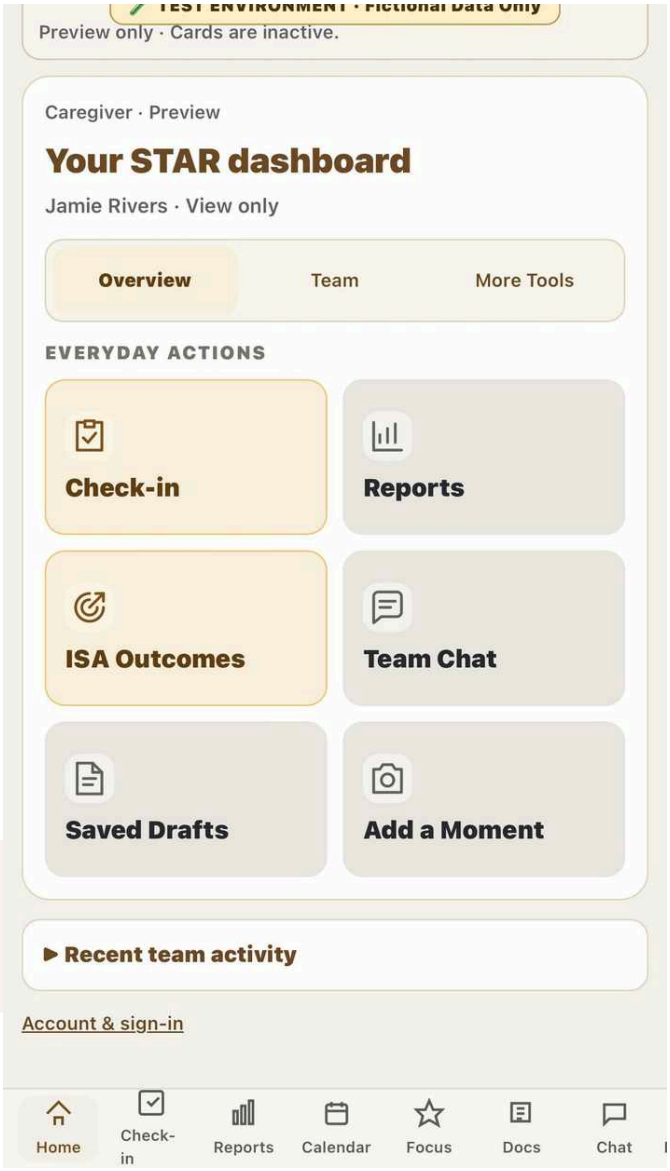

Tap Home on the bottom bar or Dashboard in the menu. Choose a tile under Everyday Actions, or use Overview, Team, More Tools, and (for administrators) Admin to find more features. The compact two-column layout reduces scrolling.

Updated dashboards — administrator and caregiver (November 2026)

The Home dashboard now uses two columns of compact action tiles to reduce scrolling. Select Overview for everyday actions, Team for team information, and More Tools for additional features. Administrators also have an Admin tab. The caregiver role preview shows fewer tabs. In the testing environment, role preview cards are inactive; to use features, return to your signed-in role. Tap an action tile to open its tool when using your actual account.

Administrator dashboard — Overview and everyday actions

Caregiver preview — same compact dashboard, without administrator-only controls

App screenshots joined from top to bottom.

Quick Actions

Check-in and Reports Record how the individual's day went, then use Reports to review entries over time.

ISA Outcomes Open the individual's outcome cards to see goals and how progress is tracked.

Add a Moment and My Month Save a photo and short note for the individual to review, or look back at a month of experiences.

Focus and Docs Open the team's weekly focus or find care documents.

Saved Drafts Return to a check-in you started on this device.

Admin tools Use Edit caregiver check-in beside Quick Actions to assign questions. Open Review My STAR Observations for submissions awaiting review or Team Updates to record important changes.

Recent Activity Scroll below Quick Actions to see recent entries when available.

Bottom navigation Use the bar to return Home or open another main tool. See How to navigate STAR for the numbered reference.

Your first session as group administrator

The person who creates a group becomes its administrator. This is the team-management role in STAR; it is not the same as owning the STAR software.

One-time setup — in the order to do it

1. Complete Steps 1–3 in the onboarding section. Create one group and copy its invitation code.

2. Set up or verify the individual's separate login and confirm it belongs to the correct group. Before entering real information, confirm that this individual is the one shown in each picker.

3. Invite each caregiver and other authorized team member. Ask them to join with their own accounts rather than sharing the admin login.

4. Confirm team members, access levels, backup coverage, respite contacts, and other roles available in the admin/team settings.

5. Open Customize Caregiver Check-in. Choose one caregiver at a time, set their required sections/questions, and save. Check the same caregiver's view.

6. Open ISA Outcomes. Draft cards from the approved ISA, then activate the agreed outcomes when ready. Link progress questions to the correct caregiver assignment.

7. Review Emergency, Docs, Calendar, Group Chat, Resources, and Team Updates. Confirm each contains the correct team's information.

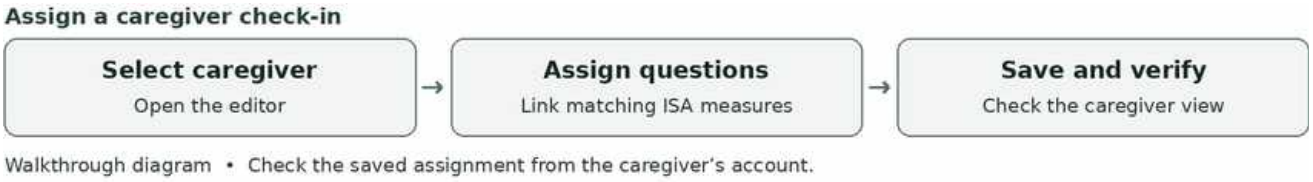

Before your team begins documenting

- Use one group for the intended team and verify every account's access before they submit records.
- Have a caregiver submit a sample fictional check-in in STAR TEST. Confirm dates, support/location entries, and ISA-linked results appear only for that individual.
- Show staff how to respond to Help Now and Something Hurts messages and how to distinguish a saved draft from a submitted check-in.

SCREENSHOT NEEDED — S06: Admin team roster / Manage team / staff permissions and where an administrator confirms a new member.

Admin | Set up and maintain the team

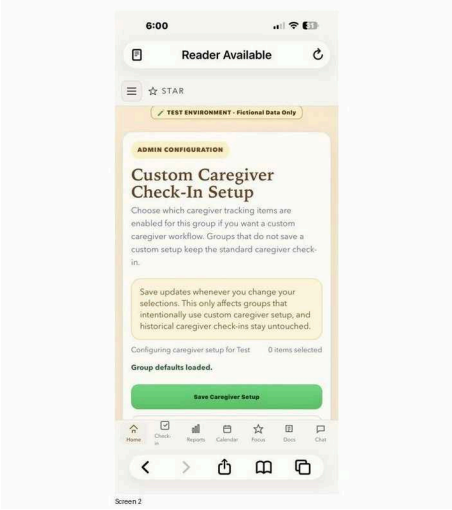

For group admins

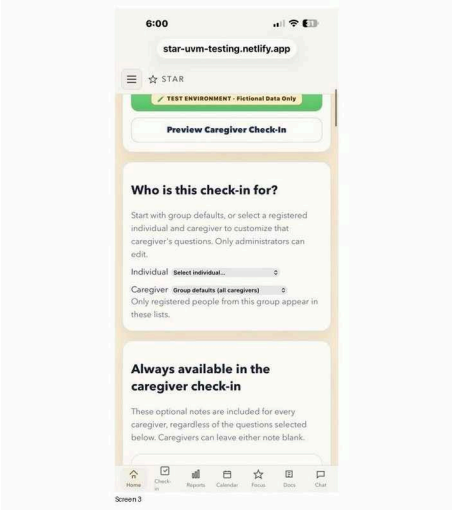

Customize a caregiver's check-in

Setup at a glance: Open the editor → choose individual and caregiver → select relevant tracking headings → Save Caregiver Setup → Preview.

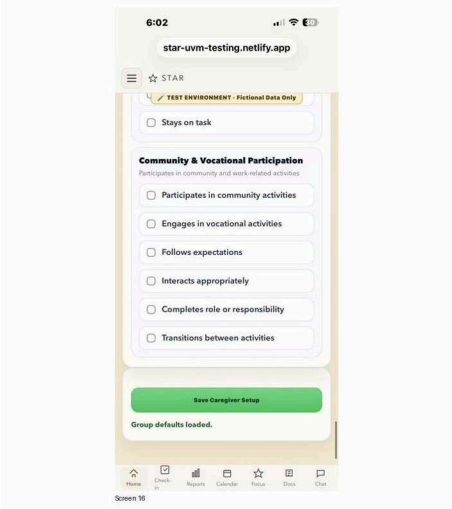

1. Open Custom Caregiver Check-In Setup

2. Choose who the check-in is for

3. Save the setup

Available headings include Behavior / Mental Health; Physical Health; Daily Living; Community; Vocational; and Education & Learning — Detailed Tracking. Select only the questions needed. Gold Star observations and the short learning note remain available without extra selections.

1. Open Customize Caregiver Check-in. Choose the caregiver whose assignment you want to edit.
2. Select the sections and questions that match the support they provide. Keep sections they still need when adding or changing an ISA assignment.
3. Review the approved ISA measures and compare each one with existing questions. Link an existing question when it captures the same measure. Add a separate question when the outcome needs information the existing question can't capture.
4. **Save the assignment. Ask the caregiver to open Check-in and confirm that the assigned questions appear. After a submission, check that the linked answer appears under the correct date and outcome.**

SCREENSHOT NEEDED — S07: Actual check-in assignment editor, including the Save button at the bottom and the saved confirmation.

Example. "Did Jamie go to the library?" records whether the visit happened. If the outcome measures minutes spent there, the yes-or-no answer alone cannot supply that number.

Record a Team Update

1. Open Team Updates and select the category that fits, such as a medication or routine change, a learning goal, or another important update.
2. Record the effective date and what the team needs to know. Use clear wording that distinguishes an update from an observation made during a shift.
3. Save the update. When preparing a report, check the selected date range for the information you expect to include.

Maintain the Emergency Sheet and team access

- Open Emergency to review the individual's key medical information and contacts. Make updates through the admin controls available on that screen.
- In Profile or Group Settings, confirm that caregivers are in the right group and have access appropriate to their role. Use the caregiver's own view to check what they can see.

DRAFT

- Open Review My STAR Observations to read Something I Did submissions. Review what the individual shared and how they were assisted before deciding whether to associate it with an ISA outcome.

DRAFT

Admin | Manage ISA outcomes and reviews

For group admins working with the individual, case manager, and planning team. STAR cards should reflect the approved ISA; they do not replace its formal review and approval process.

Walkthrough diagram • Draft the outcome with the individual and use the approved ISA to guide activation.

Draft an outcome with the individual

1. Start with something the individual remembers or wants to try. Use a photo from My Month, a My STAR response, or a conversation to learn what matters to them.
2. In ISA Outcomes, select Add Outcome. Create your own card or adapt a bank example. Record a direct quote as the individual's own words. Label a team interpretation as an observed preference.
3. Write the outcome and the support that will help. In How Progress Is Documented, specify what the caregiver should record, such as minutes, steps completed, or frequency. Describe the prompts or help that should be recorded when relevant.
4. Read the outcome back in a way the person can understand. Save it as a draft while it's being reviewed. When the card is ready and reflects the approved ISA, activate it and link the matching check-in question if one already exists.

Review progress over time

1. Open the active outcome card and pull up the corresponding report for the review period.
2. Look at the measure alongside what the person says about the activity. Ask what they want to continue or change. Use a team review to discuss progress according to the schedule in the ISA.
3. For a proposed change, open the Vermont ISA forms in the Feature Guide and coordinate the formal review with the case manager and QDDP. Update the active card to reflect the approved change.

Find the forms

In the STAR Feature Guide, open Caregiver tools, expand ISA Outcomes, and find Vermont ISA forms. The guide links the ISA Basic Form, Required Approvals Form, and Review/Change Form, along with DDSD's ISA guidelines.

An ISA outcome can stay active while the team documents progress and discusses changes. Use Focus of the Week for short-term team priorities that can sit alongside the approved outcomes.

Administrator’s weekly and monthly review

These are ongoing oversight tasks. They do not mean changing approved ISA goals each week.

Each week, as needed

1. Open Home to check notifications, team updates, outstanding drafts or My STAR observations needing admin review.

2. Open Reports, choose the correct individual and date range, and review recently submitted check-ins. Check that supports and locations were recorded when relevant.

3. Open Review My STAR Observations to read Something I Did submissions. Keep the person’s own statements separate from a caregiver interpretation.

4. Review urgent Group Chat messages and follow-up discussions. For emergency situations, follow your safety plan; STAR messages do not replace emergency response.

5. Update Focus of the Week for short-term team practices; do not use it as a substitute for an ISA amendment.

DRAFT

Monthly or at formal team-review times

1. Choose a full reporting period and inspect the daily list, longer-range summary, and ISA progress. Confirm no other individual’s records appear.

2. Compare the measurements with the active ISA outcome cards and with the person’s My STAR preferences and experiences.

3. Share the approved information with the case manager and planning team through the appropriate authorized process. For a requested ISA change, coordinate formal approval before changing an active outcome.

SCREENSHOT NEEDED — S07: Admin Review My STAR Observations / Awaiting admin review screen.

SCREENSHOT NEEDED — S08: Daily report and monthly / custom date-range selector with one fictional individual.

Your first session as a caregiver or DSP

This section is for direct support professionals, respite caregivers, family caregivers, and other approved staff who record support.

Set up once

1. Get the STAR link and invite code from your administrator. Complete Step 1, join the group (Step 4), and save your Profile (Step 6).

2. Open Home and confirm that the correct group and individual are shown. If someone is missing, contact the administrator before creating a record.

3. Ask which sections you are assigned in Check-in. A caregiver may have fewer or different questions than another team member.

4. Find Group Chat, Docs, Calendar, Focus, Emergency, Reports, Saved Drafts, and the Feature Guide. Learn where Help Now and Something Hurts alerts appear.

Each shift

1. Open Check-in. Confirm the individual and the service date, especially for a late or backdated entry.

2. Complete assigned sections; record facts, what support you provided, where support occurred, and the individual's own words separately.

3. Save a draft if you are not finished; return through Saved Drafts to submit the entry. Confirm the submission appears in Reports.

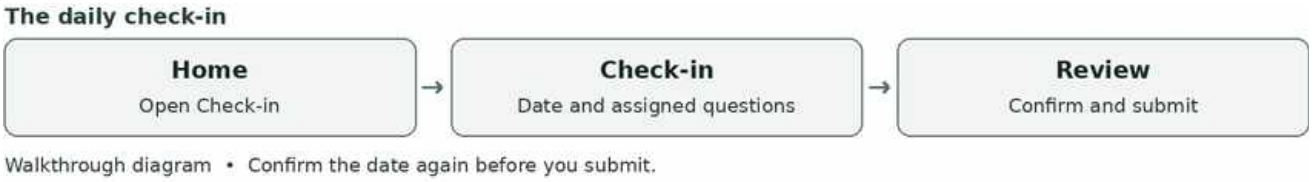

4. If an experience would be meaningful to remember, use Add a Moment with a photo and short label, so the individual can choose their own reaction later.

5. Check Group Chat and the dashboard for relevant team notifications and follow the agreed communication procedure.

SCREENSHOT NEEDED — S09: Caregiver Home after joining, showing the main Quick Actions and the person/group selected.

Caregiver | Complete a daily check-in

For caregivers and direct support staff

Start and submit a check-in

1. From Home, open Check-in and select Begin Check-in if prompted.
2. Check the date. For a late entry, use the date of the support you're documenting. If the screen shows a person selector, confirm who the entry is for.
3. Work through the guided sections that apply. Use Jump to Section if it's available and you want to go directly to a particular topic.
4. Record what you observed and the support you provided. If you include the person's own words, identify them as a quote. Add an ISA answer when the check-in asks for it.

SCREENSHOT NEEDED — S10: Where Support Provided and Location appear in a caregiver check-in.

5. Review the answers and confirm the date before submitting. If the app reports a problem, read the message and check whether the entry already appears before trying again.

Work with assigned sections

The admin can assign sections and questions by caregiver. Two caregivers may see different questions because their work and assignments differ.

- Use the fields you see for topics such as sleep, health, activities, education or learning, and positive observations. If a question you need is missing, ask the admin to review your assignment.
- When a question also measures an ISA outcome, the admin can link it so the same answer can support both the check-in and the outcome record.
- When documenting an activity, describe the support and the person's response. For example, "Jamie chose the library. I helped with the first step at checkout, and Jamie returned the books independently."

Resume an unfinished entry

1. **Open Saved Drafts on the device where you started the check-in and choose the entry to resume.**
2. Check that the date and answers match the entry you meant to complete. Finish and submit it from the check-in screen.
3. Delete a draft from Saved Drafts if you no longer need it.

Before submitting, confirm that the entry describes the correct person and date.

Caregiver | Record support provided and location

Documenting what kind of support occurred and where it happened makes daily records more useful for the team, reports, and service review.

When you complete a check-in

1. Begin a check-in for the correct individual and service date. Find the Support Provided and Location fields in the shift details or relevant assigned section.

2. Choose all support types that apply, if the screen permits multiple selections. Do not select something that was not provided.

3. Choose the location or locations where support actually occurred, if multiple selection is available. Follow the labels in your version of STAR.

4. In the narrative, describe the person's activity, how much help they received, any prompts, and how they responded. Use their exact words when possible and identify them as a quote.

5. Review and submit. Open Reports for the same date to check that the support and location entries were saved and shown accurately.

DRAFT

What a useful note looks like

Example: "Jamie chose to go to the library. I reminded Jamie of the checkout steps and helped with the first step. Jamie returned the books independently and said, 'I want to come again.'"

If the fields are not shown

Ask the administrator to check your assigned questions and whether Supports & Locations is enabled in your STAR environment. Do not insert information into an unrelated field just to force the report.

SCREENSHOT NEEDED — S10: Daily check-in screen showing the Support Provided multi-select and Location multi-select.

SCREENSHOT NEEDED — S11: A saved daily report showing those selected values for the same entry.

Caregiver | Review reports and team tools

For caregivers and administrators. Case managers may use the reports their permissions allow; see the dedicated case-manager section.

Walkthrough diagram • Check your active group before opening a team record.

Find the record you need

1. Open Reports and choose the date range you want to review. Confirm the individual if the report offers a selector.
2. Choose the relevant report or topic. A daily entry helps you check what was recorded on a particular date. A summary or trend view helps you review a longer period.
3. For ISA progress, open the available ISA report. Review the measure and any linked answers in the same date range. If something you expect is missing, check the original entry, its date, and the caregiver's measure link.

Review How I Feel and My Day responses

In Reports, choose the individual and date range you want to review. Look for the person's My STAR responses alongside caregiver documentation. How I Feel captures the feeling they selected. My Day captures their rating of an activity and the activity name if they shared one. When reviewing the original entry, check whether they marked Someone helped me answer.

If a saved response is missing from the report, check the individual and date range. If the team needs the response in its documentation, use the relevant caregiver check-in note and identify it as the person's own response. Keep any caregiver observations separate.

These check-ins give the team a record of what the person says about how they feel and what they enjoy. For example, if someone repeatedly chooses I liked it after swimming, the team can ask if they want more chances to swim. A Tired response gives the team a reason to ask how the person is doing. If someone skips, leave their response blank.

Use Home and Group Chat

Open Home for Quick Actions. When someone sends a Help Now or Something Hurts alert from My STAR, look for the notification on the caregiver or admin Home dashboard and open Group Chat to read the message and any follow-up details. Confirm the active group before sending a reply.

DRAFT

Use Calendar and Docs

- Calendar shows group events. Select an event to view its details or use the add option to schedule an event if your role allows it.
- Docs groups documents into categories such as medical records, meeting minutes, and guardianship documents. Start by opening the category that matches the file you need.
- Emergency opens the Emergency Sheet with key medical and emergency information for the individual. Admins manage changes to the sheet.

Coordinate priorities and account access

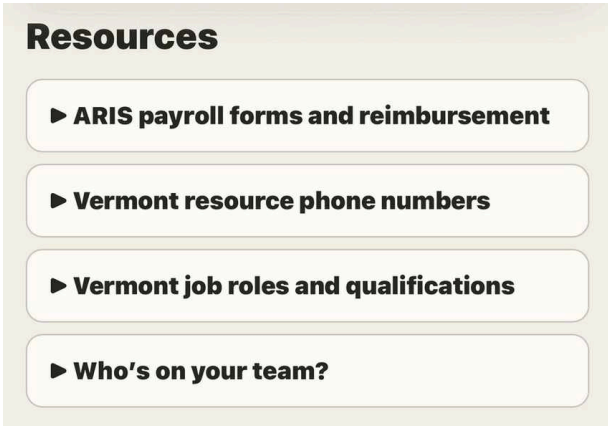

- In Focus of the Week, choose a priority, describe what the team will try, and save it. Return later to review how it went.
- In Profile, check your account and group. Use Group Settings to manage team access if your role allows it.

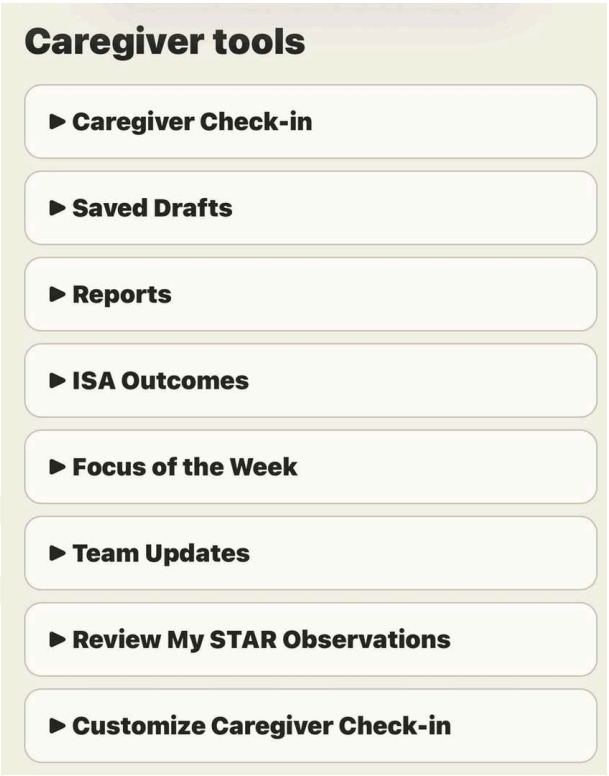

Example. If a caregiver reports an activity in Chat and the team also wants that activity tracked for an outcome, use the assigned check-in question to record the progress measure.

DRAFT

Caregiver | Find resources and instructions

Open Menu, then Resources. You can also open Docs and tap its Resources card. Tap a section heading to expand it and see its instructions or links.

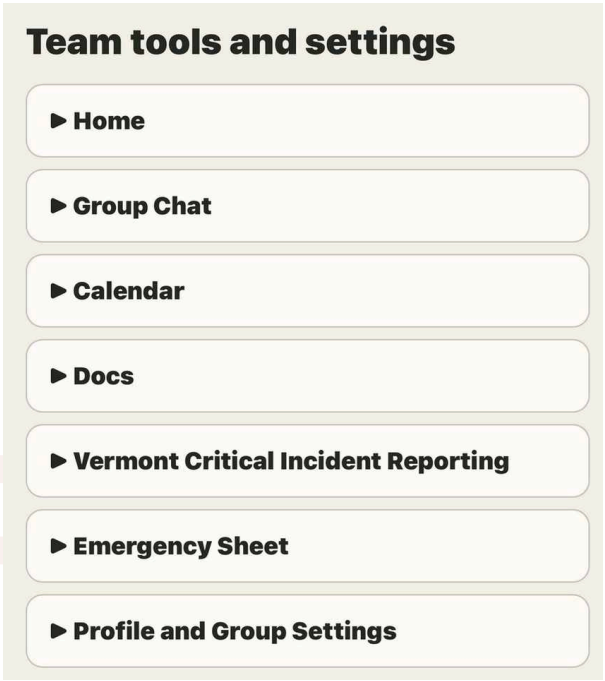

Resources Find ARIS timesheets and reimbursement forms, Vermont phone numbers, role guidance for case managers, QDDPs, DSPs and respite providers, and the printable Who's on your team? worksheet.

Caregiver tools Find instructions for Check-in, Saved Drafts, Reports, ISA Outcomes, and Focus of the Week. Admins can also find guidance on Team Updates, reviewing My STAR observations, and customizing caregiver check-ins.

Caregiver | Find My STAR and team guidance

Continue scrolling in the Feature Guide to find the sections below. Tap a heading to see what the feature does and how to open it. Illustrated instructions for the two communication and support preparation tools are in Part 6.

Photos and monthly review Find Add a Moment, My Moments to Review, and My Month.

My STAR Find help and pain communication, feelings, choices, accomplishments, team communication, and accessibility options.

Team tools and settings Find Home, Group Chat, Calendar, Docs, Vermont Critical Incident Reporting, Emergency Sheet, and Profile and Group Settings.

Case manager | Get access and prepare a review

A case manager typically needs to understand the individual's experiences, review support documentation, and coordinate the ISA process. Exact STAR permissions must be confirmed for each group.

First-time setup

1. Ask the group administrator to confirm whether a case-manager account or another permitted access path is available in this STAR version. Do not assume the app offers a separate "Case Manager" role at sign-up.

2. Use your own email/login and the authorized team invitation. If you cannot complete onboarding, ask the administrator to verify the invitation and approved role rather than creating a new team group.

3. After sign-in, confirm group, individual, and permissions with the administrator. You should only see records the team has authorized you to access.

4. Find Reports, ISA Outcomes, Docs, My Month, and Resources if they are visible to your account. Use the administrator's shared reports or another approved method when a section is not available.

DRAFT

Before a monthly check-in or quarterly review

1. Agree on the reporting period (for example, the past month or the dates since the last review). Confirm the correct individual.

2. Review the daily check-in list, longer-range summary, support and location records, and relevant My STAR responses when authorized.

3. Compare notes with the active ISA outcome cards. Identify what is working, any barriers, unanswered questions, and the individual's preferences.

4. Prepare concrete, accessible questions for the individual rather than relying on abstract or open-ended prompts.

SCREENSHOT NEEDED — S12: Case-manager first screen after sign-in, or the exact approved account path/permissions when a dedicated role is unavailable.

Case manager | Review ISA progress and follow up

Use STAR as a source of observations and the individual's input alongside the official case-management documentation and review process.

Conduct a review with the team

1. Open or request the Active ISA Outcomes view. Verify that the cards match the approved ISA and that draft ideas are not being treated as active goals.

2. Use Reports for a defined date range. Review measures, staff observations, and the individual's own responses side by side. Look for missing entries or mismatched people/dates before drawing conclusions.

3. Invite the individual to discuss photos from My Month, what they liked or did not like, and what they want to try again. Respect skipped questions or nonresponse.

4. Discuss barriers, successes, supports, and next steps with caregivers and the administrator. Keep interpretation distinct from exact words or selections.

5. For the regularly scheduled quarterly review or proposed ISA change, follow the official Vermont approval and change process. STAR outcome cards are updated only to reflect approved changes.

After the review

1. Confirm who will follow up on each item and how it will be communicated to the team.

2. Use Documents, Calendar, Focus, or Group Chat only if your account permissions and the team's documentation rules allow them.

3. For critical incidents, use the required agency and Vermont reporting process. STAR's resource links do not themselves submit an official incident report.

SCREENSHOT NEEDED — S13: Active vs Draft ISA card and the associated progress report, showing one fictional individual only.

SCREENSHOT NEEDED — S14: Report date filters / monthly summary and My Month view used during a case-manager meeting.

Welcome to My STAR

My STAR is the individual's place to share experiences in their own way. Participation is voluntary; the person can choose an answer, skip a question, or stop.

The first time

1. With a helper if wanted, create and confirm a separate individual account, choose I am an Individual, and join the team using its code.

2. Choose a preferred display name and optional picture, and save Profile. Confirm the correct team group opens.

3. Explore the My STAR tiles together. Start with How I Feel or My Day, and show how to get back to My STAR.

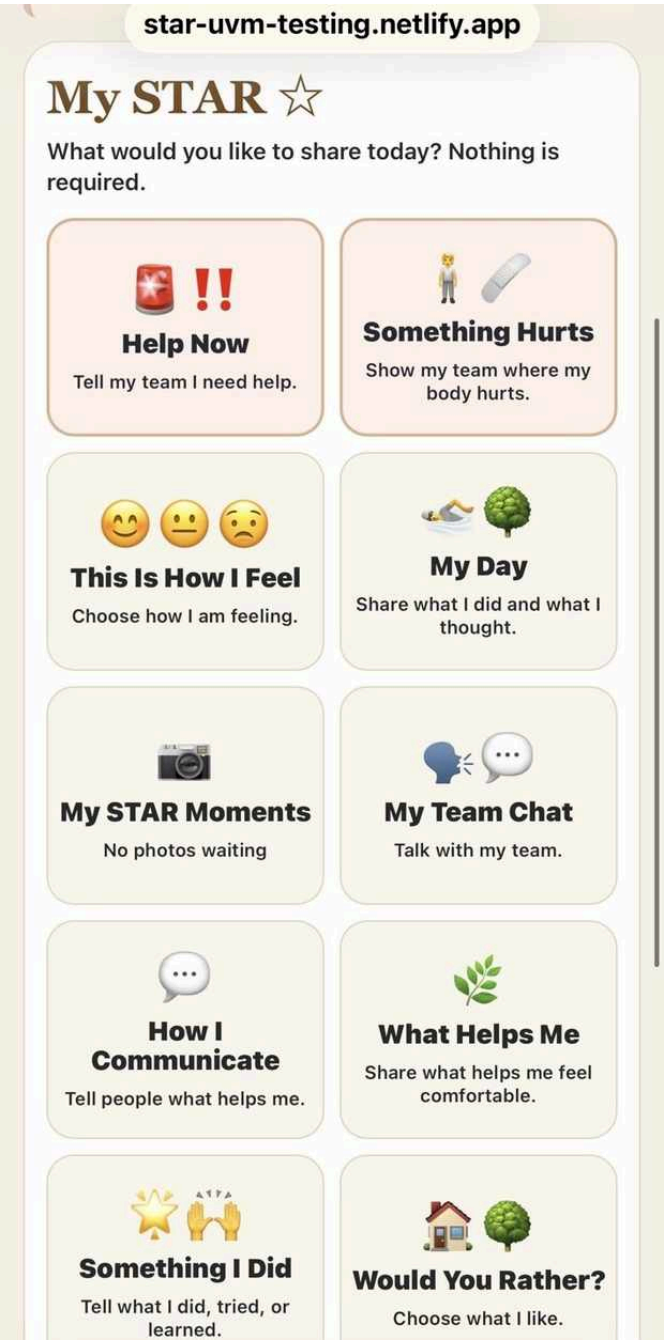

4. Try Read Aloud and Mic Setup. The person may type, talk, tap, point, or ask for help to enter the words they choose.

5. Show Help Now and Something Hurts first so the person knows how to tell the team something important. For immediate emergencies, get help from a nearby person or follow the emergency plan.

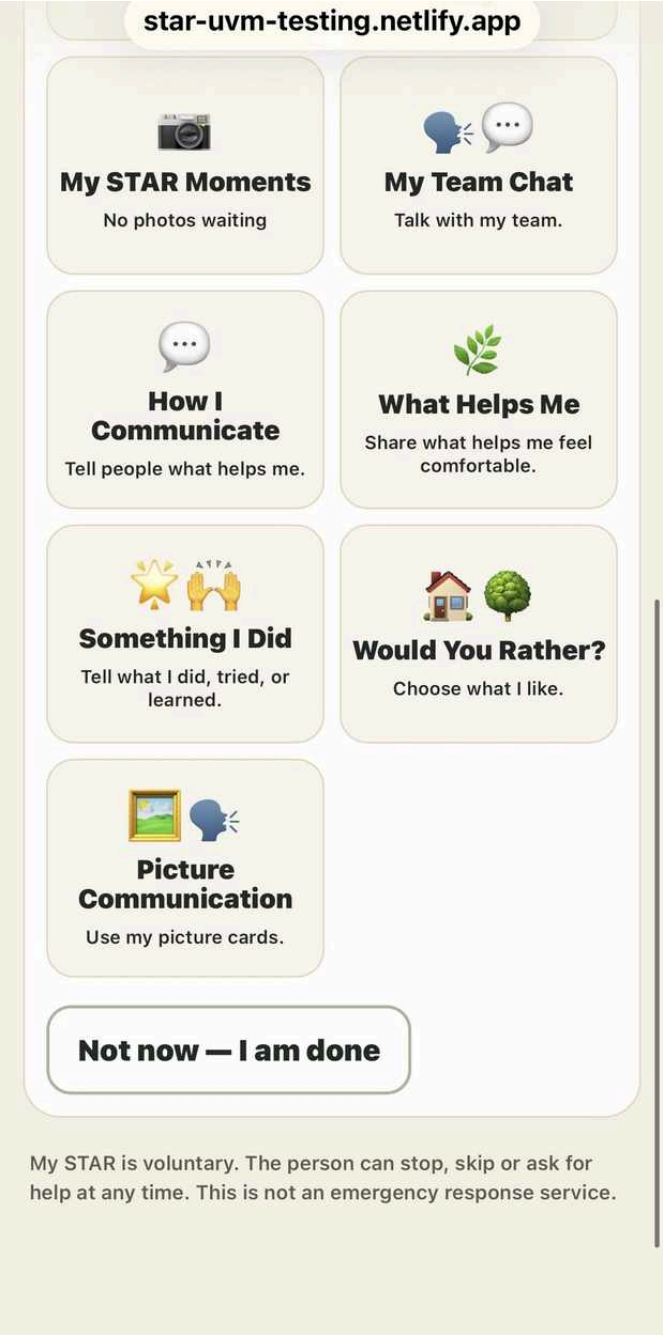

Helpful support means

Updated My STAR home — individual dashboard (November 2026)

My STAR uses two columns of large, touch-friendly picture tiles. Help Now and Something Hurts appear first so they are easy to find. Next are This Is How I Feel and My Day. Other tiles include My STAR Moments, My Team Chat, How I Communicate, What Helps Me, Something I Did, Would You Rather?, and Picture Communication. Tap a tile to open it. The person can stop by choosing Not now — I am done. The arrangement reduces scrolling without removing features.

My STAR — Help Now, Something Hurts, feelings, My Day and other tiles

My STAR — additional communication, Moments and choice tiles

- Read or show one option at a time, allow enough time to decide, and confirm before tapping on the person's behalf.
- Record the individual's own selection or words and mark Someone helped me answer when the screen asks.
- Do not turn skipped activities into a caregiver-selected answer. Caregiver observations belong in their own documentation.

Individual | Get to know My STAR

Tap a picture tile to share feelings, choices, or experiences, or to communicate with your team. The two-column layout keeps Help Now and Something Hurts at the top. Each tile opens its own guided activity.

App screenshots joined from top to bottom.

Find the tile you want

Read Aloud and Mic Setup Tap Read Aloud at the top to hear prompts. Tap Mic Setup to practice speaking into a text box. Follow the steps on page 12.

Help Now and Something Hurts Tell your team you need help or use the body map to show where it hurts. If you need immediate help, get someone nearby or follow your emergency plan.

How I Feel and My Day Pick a face to show how you feel or tell your team how your day went.

My Moments to Review Look at a photo and share what you thought about the activity.

Something I Did Share something you did, tried, or learned.

Talk to My Team Send a message or open the group chat.

Would You Rather? Use pictures to choose what you might like to do.

Picture Communication Use your picture cards to help say what you want to share.

Not now — I am done Stop whenever you want. You can come back another time.

My STAR | Daily use

For the individual and anyone helping them use STAR

How I Feel

1. Open My STAR and tap How I Feel. Pick the face that matches how you feel right now. The choices are Happy, Okay, Sad, Upset, Tired, and Not feeling good.
2. If someone helped you answer, check Someone helped me answer. Tap Done to save your choice. Tap Not now to skip.

If you are helping, read the choices aloud, wait, and let the person point, tap, or say their choice. If they ask you to tap for them, confirm their choice first.

My Day

1. Open My STAR and tap My Day. Think about an activity from today. Tap I liked it, It was okay, I did not like it, or Not today if you did not do the activity today.
2. To name the activity, tap the box under Which activity? and type its name, or tap Talk Instead and say it. If asked for microphone access, tap Allow. Check that your words appear in the box and fix them if needed. You can leave the box blank.
3. Check Someone helped me answer if you received help. Tap Done to save. Tap Not now if you want to skip the check-in.

Ask for help or show where it hurts

Tap Help Now or Something Hurts in the first row of My STAR to send a message to your team. The full instructions are in the Help Now and Something Hurts sections that follow.

Share something you did

1. Open Something I Did when you want to tell your team about something you did, tried, or learned.
2. Describe what happened in your own words. If the screen asks whether someone helped, say how you did it and what help you used.
3. Tap Done to send the observation for review. The admin can review it and decide whether it relates to an ISA outcome.

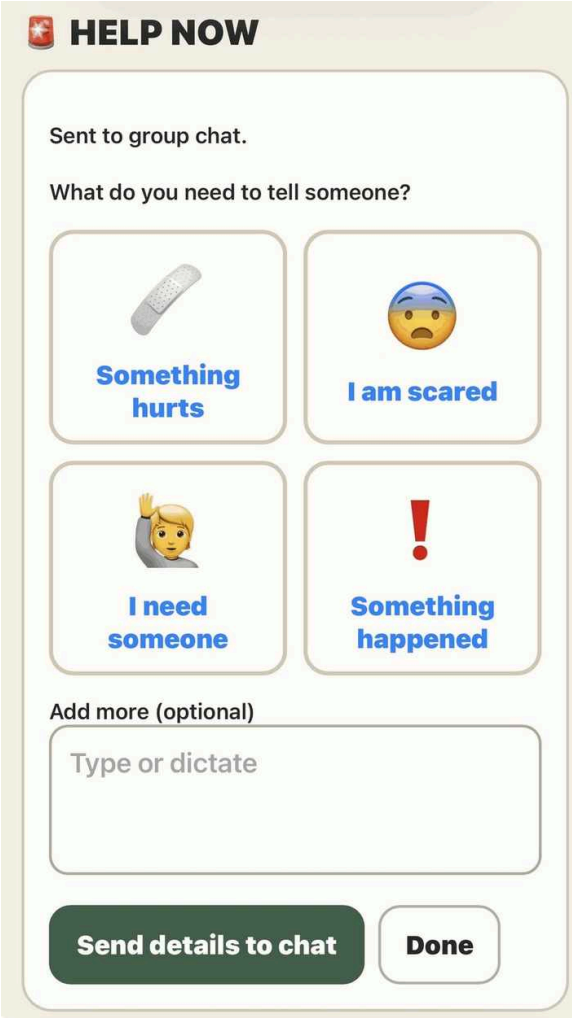

Explore what you might like to do

1. Open Would You Rather? and look at the picture choices. Take one choice at a time, such as whether you'd like to be inside or outside.
2. Follow the choices until you find an activity that interests you. Use the option for something else or stop if the choices don't fit.

If you're helping, give the person time to look and respond. Record their selection or words as they communicated them. Keep your interpretation separate.

Individual | Help Now

Use Help Now to tell your whole team directly that you need help. You can do this yourself or ask someone to help you choose a picture or enter your words. Your team gets the alert in Group Chat and on the caregiver or admin Home dashboard.

What to tap

1. Tap Help Now. Open My STAR and tap the red Help Now tile in the first row. Look for “Sent to group chat.” That means your first message went to the team.

2. Choose a picture if you want. Tap Something hurts, I am scared, I need someone, or Something happened to tell the team more.

3. Add words if you want. Tap the Add more box. Type your words, use dictation if available, or ask a helper to enter the words you choose.

4. Send the details. Tap Send details to chat if you want the team to see your picture choice or words. Tap Done when you’re finished. If you only wanted to send the first alert, you can tap Done without adding details.

If you need help right away, get someone nearby or follow your emergency plan.

Individual | Something Hurts

Use Something Hurts to tell your whole team directly and show where it hurts. A helper can read the choices or help you tap the spot you point to. Your team gets the alert in Group Chat and on the caregiver or admin Home dashboard.

What to tap

1. Tap Something Hurts. Open My STAR and tap Something Hurts in the first row. Look for “Sent to group chat.”

2. Choose Front or Back. Tap the button for the side of your body that hurts.

3. Tap the spot. Tap the circle closest to where it hurts. If symptom choices appear, pick one that matches how it feels, or send just the body location.

4. Show whether you had help. Check Someone helped me answer if someone helped you use the screen or choose your answer.

5. Send the details and finish. Tap Send details to chat to tell your team what you chose. Tap Done when you’re finished, or Not now to stop adding details. The first alert has already been sent.

If you need help right away, get someone nearby or follow your emergency plan.

Individual | Read Aloud and microphone

Use Read Aloud when you want STAR to speak. Use the microphone when you want your own words to appear in a text box. You can use either feature on its own.

Hear a prompt

1. **Open My STAR.** At the top of the dashboard, find Read Aloud beside Mic Setup.
2. **Turn it on.** If it says Read Aloud: OFF, tap it once so it says Read Aloud: ON. If it already says ON, leave it on.
3. **Try it with How I Feel.** Tap How I Feel and listen for the prompt to pick a face. If you want to finish the activity, pick a face and tap Done. To skip it, tap Not now.
4. **Turn it off when you want.** Return to My STAR and tap Read Aloud: ON. The button changes to Read Aloud: OFF. If you hear nothing while it is on, check your device volume and open the activity again.

Set up and test the microphone

1. **Open Mic Setup.** At the top of My STAR, tap Mic Setup. Ask a helper to stay with you the first time if you want.
2. **Start the test.** Find the Microphone test box and tap Talk Instead. If your phone or browser asks to use the microphone, tap Allow.
3. **Say a short phrase.** Try “I like music.” Look in the test box for your words and check that they match what you said. The practice words are not saved.
4. **Return to the dashboard.** Tap Back to My STAR when you’re finished. If no words appeared, try Talk Instead again. If access was blocked, a helper can check microphone permission for STAR in the browser’s site settings.

Speak into a text box during an activity

1. **Open an activity.** For example, open Something I Did. Look for Talk Instead near the text box.
2. **Tap Talk Instead and speak.** Say what you want to share. If the button says Stop when you finish speaking, tap it and wait for the words to appear.
3. **Check your words before saving.** Tap the text box to fix any mistakes. You can also type your whole answer. When the words are right and you’re ready to share them, tap Done.

Individual | Moments, photos and communication

For the individual and a supporter; caregivers may also add Moments and review My Month. For How I Communicate and What Helps Me, see Part 6.

Look back at a Moment

1. Open My Moments to Review. A photo may also appear after a mood check-in.
2. Look at one photo at a time. Choose how you felt about the activity and whether you'd like to do it again.
3. Add your own words if you'd like. Choose Not now if you want to return to it later.

Add a Moment for someone to review

1. Open Add a Moment and select the individual before uploading a photo or using the camera.
2. Enter a short activity label and category. Add a caregiver observation if it helps explain what happened.
3. Save it for the individual to review. Keep the activity description simple enough for the person to recognize it later.

Review a month of experiences

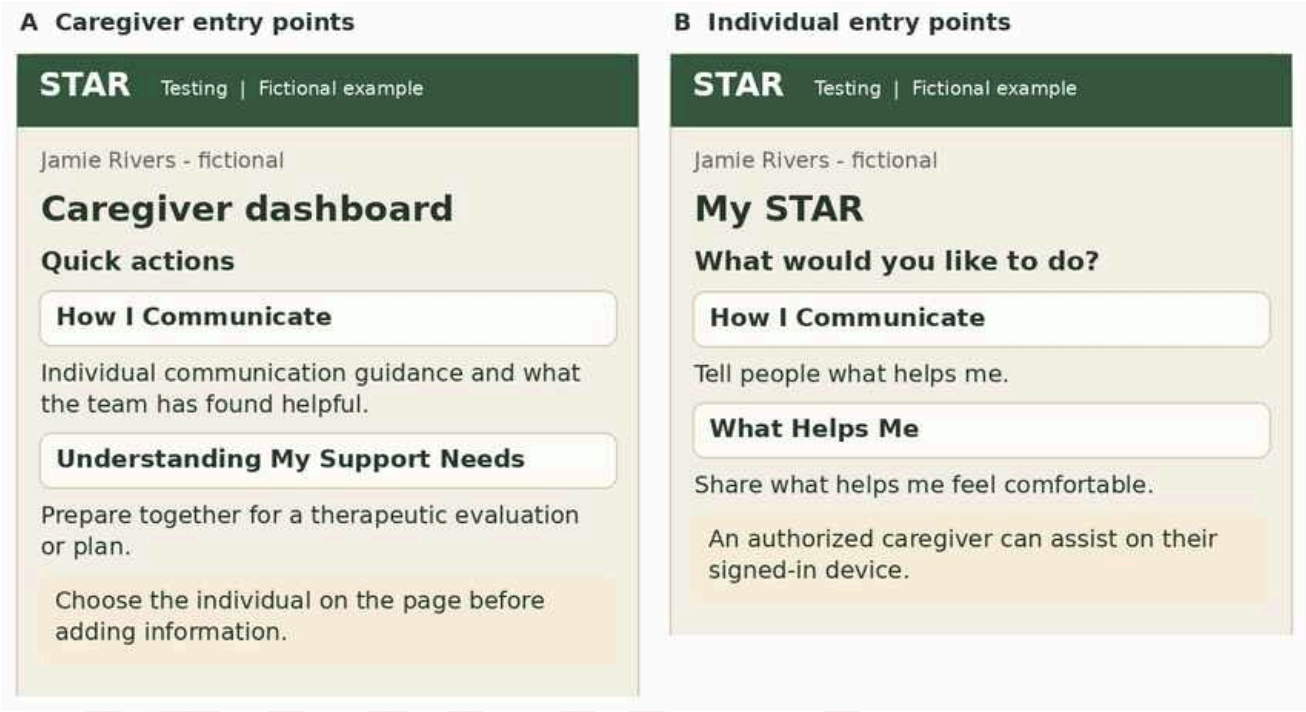

1. Open My Month, choose the individual and month, then select a photo.
2. Read what the person shared about the activity and look at the support they used. Completed Moments show caregiver observations separately.
3. During a team review, invite the individual to choose a photo to discuss. Ask whether they want to do the activity again or change something about it.

Talk to your team and use picture cards

1. From My STAR, open Talk to My Team. Choose Group Chat to communicate with the active group, or open Picture Communication to use picture cards.
2. In Group Chat, type your message and tap Send. In Picture Communication, choose a picture that helps communicate what you want to say.

Find the new tools

For individuals, supporters, caregivers, administrators and case managers. These two tools serve different purposes and keep information connected to the selected individual.

Illustrative screen mockups with fictional examples. Excerpts show relevant controls; scroll in the app to see the complete screen.

1. On the caregiver dashboard, scroll through Quick Actions. Open How I Communicate for communication guidance, or Understanding My Support Needs to prepare information for professional planning.

2. In My STAR, open How I Communicate or What Helps Me. What Helps Me opens the support preparation workspace.

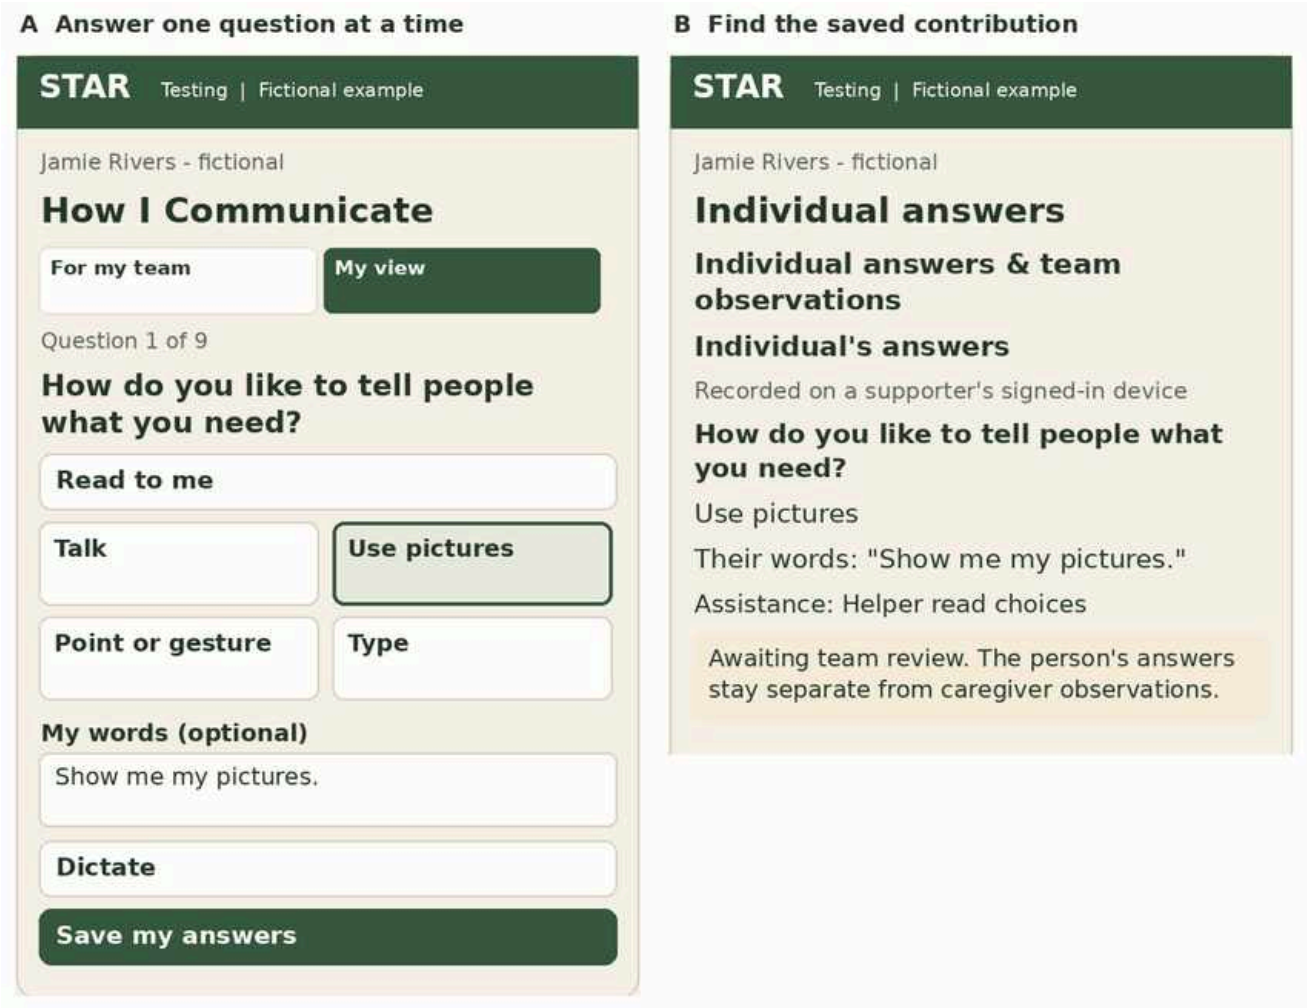

3. On either feature page, check the name in Individual before reading or saving anything. A caregiver with access to several people selects the intended person. An individual account is limited to its own linked profile.

4. The individual may use an authorized caregiver's signed-in phone or tablet. Keep their actual answers separate from the supporter's observations; the saved entry identifies the real recorder.

The features described here are available in UVM Testing. Use fictional information in that environment. Each new individual profile starts blank; another person's answers and support strategies are not copied into it.

How I Communicate personal answers

Help the individual describe what makes communication easier. Participation is voluntary; completing every question is not required.

Illustrative screen mockups with fictional examples. Excerpts show relevant controls; scroll in the app to see the complete screen.

1. Open How I Communicate, verify Individual, and select My view. Read the question or tap Read to me.

2. Tap any choices that fit. Tap a selected choice again to remove it. Add the individual's own words by typing, Dictate, or the keyboard microphone. Use I'm not sure or Skip this question when appropriate.

3. Use Next question and Back to move through the nine questions. Answers are retained while navigating this page. The optional For my helper area records how assistance was provided.

4. Tap Save my answers when the person is ready. Save is available before all questions are answered. Wait for the saved confirmation.

5. To find the answer later, open For my team and expand Individual answers & team observations. The entry shows the individual's words separately, along with assistance and recorder information.

An individual's contribution is not automatically published as team guidance. A helper should enter only what the person actually communicated, including through gestures or pictures.

How I Communicate team guidance

Caregivers read and contribute observations. Administrators maintain the published guide for the selected individual.

Illustrative screen mockups with fictional examples. Excerpts show relevant controls; scroll in the app to see the complete screen.

1. Open For my team. Read the individual-specific statement and Start here guidance. Expand Communication dictionary to read signals, what they might mean, and what has helped.

2. Administrators select Edit team guide. Enter information in the relevant optional fields: communication, choices, harder moments, engagement, first contact, tools, settings, detailed information, source reference and review guidance.

3. In Communication dictionary, tap Add a signal. Enter the actual words or action, a possible meaning, and the response that has helped. Remove an unused signal row when needed.

4. Check every entry against this person's needs. Tap Publish guide for the individual. Publication creates a new version; expand Published guide history to read earlier versions.

5. Other caregivers use Suggest an update to submit proposed wording. Administrators review the suggestion and separately edit/publish any agreed change.

Mark reviewed records that the item was reviewed. It does not rewrite the person's words, automatically publish a suggestion, or establish professional approval. Possible meanings must remain possibilities, not assumed facts.

Record observations and orient new supporters

Use dated observations to help the team learn what works for this individual. Use published guidance to introduce their communication needs to new supporters.

Illustrative screen mockups with fictional examples. Excerpts show relevant controls; scroll in the app to see the complete screen.

1. In For my team, select Record what helped. Enter What I noticed, What support I offered, and What happened next. All three are needed to save the observation.

2. Add the individual's exact words when available. Keep any possible meaning in the separate optional interpretation field. Tap Save observation for team review and wait for confirmation.

3. Expand Individual answers & team observations to read the dated record. An administrator may Mark reviewed; the shared guide remains unchanged until it is separately edited and published.

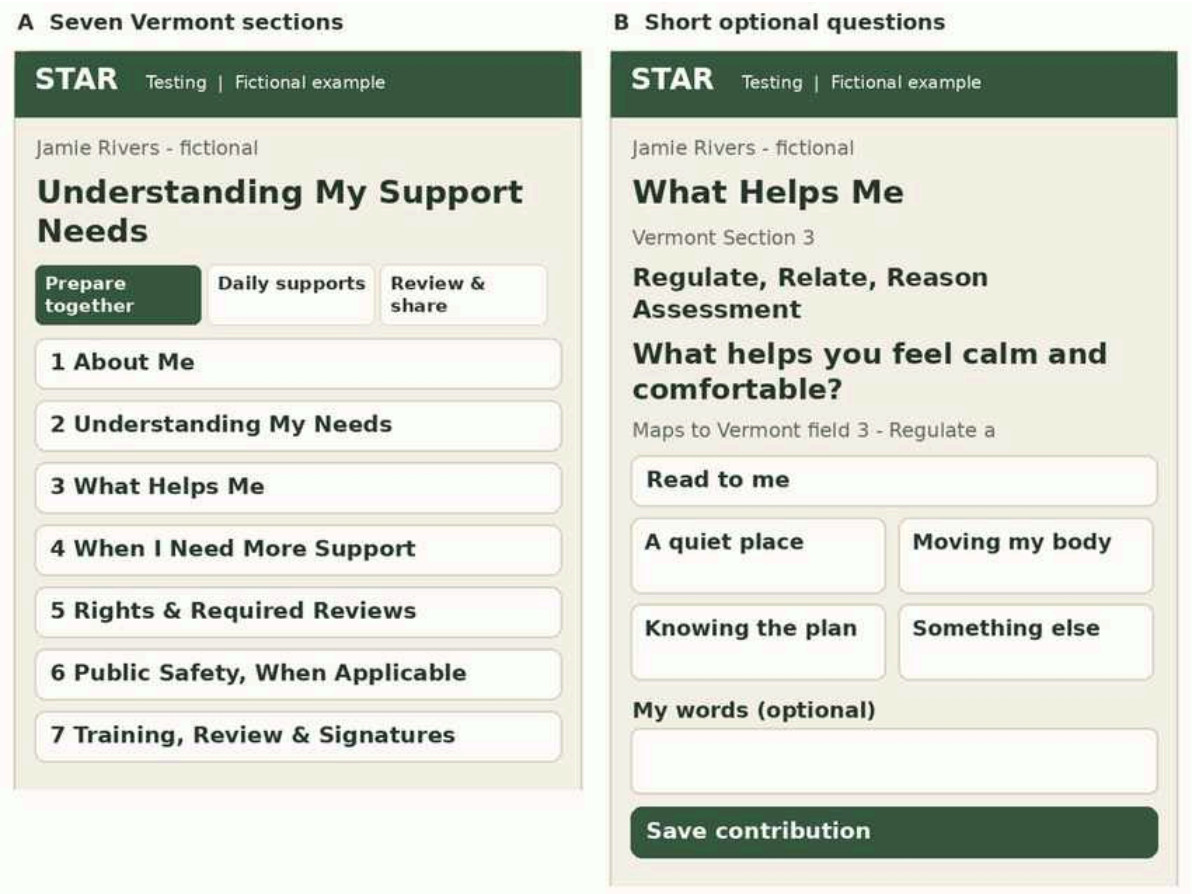

4. For orientation, select First-contact guide. Read the selected individual's published first-contact information and related communication supports. If the team has not added a guide, no personal instructions will be available.

5. Use Print this guide from first contact, or Print guide in team view. In the browser print dialog, choose a printer or Save as PDF when available. Follow your team's process for sharing personal information.

The first-contact guide is intended to help new staff and relevant medical or public-safety workers understand the individual. Pending observations are not printed as published guidance.

Prepare for a professional conversation

Understanding My Support Needs is a helpful place to start before requesting a therapeutic evaluation or plan. Professional support can be requested at any point; completing this workspace is not a prerequisite.

Illustrative screen mockups with fictional examples. Excerpts show relevant controls; scroll in the app to see the complete screen.

1. Open Understanding My Support Needs from the caregiver dashboard, or What Helps Me from My STAR. Verify the selected individual and choose Prepare together.

2. Open any of the seven sections. They follow Vermont's template: About Me; Understanding My Needs; What Helps Me; When I Need More Support; Rights & Required Reviews; Public Safety, When Applicable; and Training, Review & Signatures.

3. Read the displayed Vermont section and field reference. Use Choose a question to jump within that section, or Next question and Previous to move one question at a time.

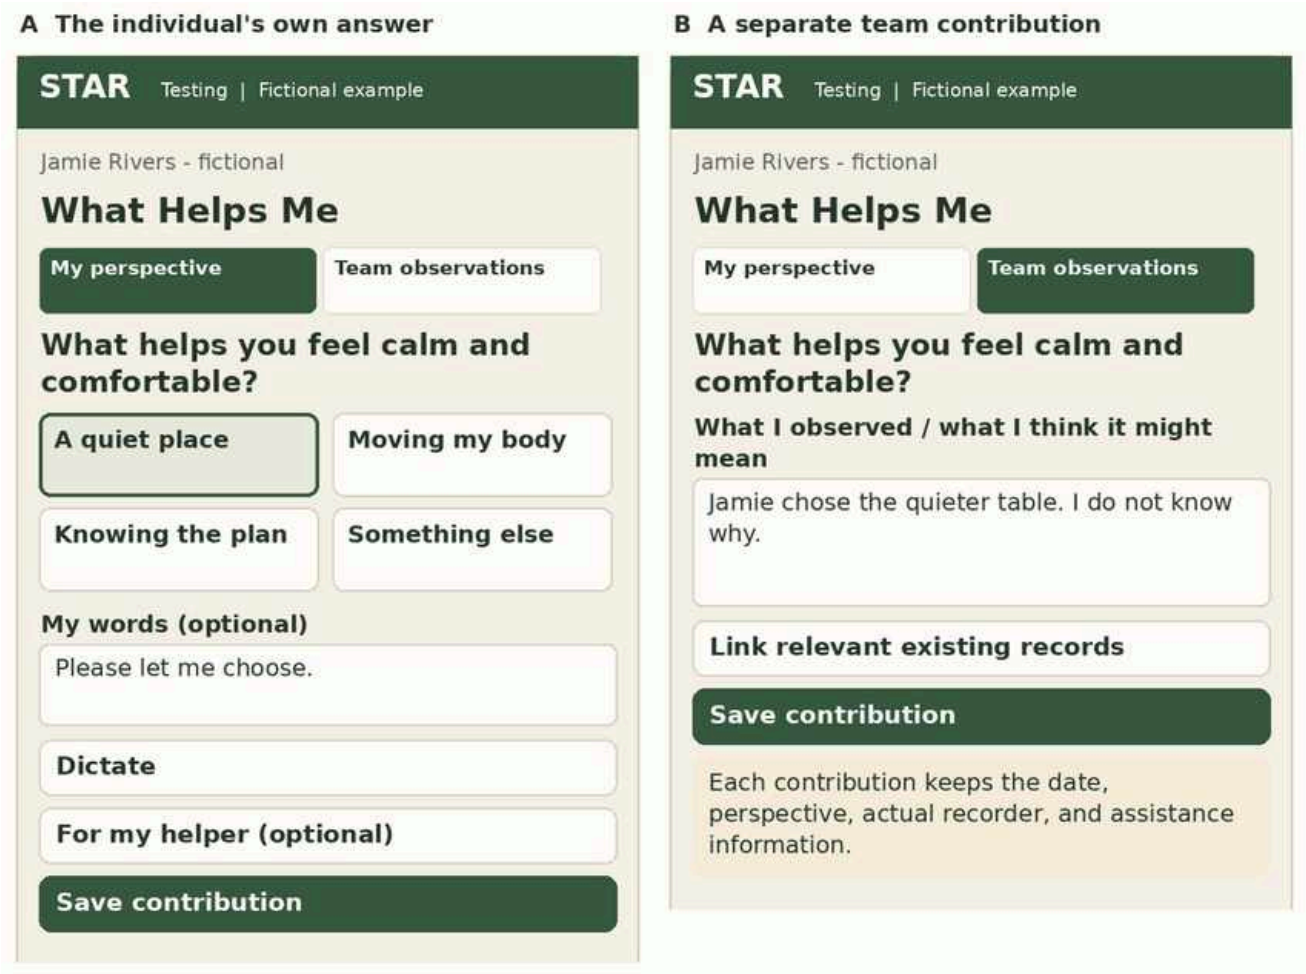

4. Answer only what is useful and comfortable. A question about sensitive history may simply be answered with a request for a private professional conversation. Leave unanswered questions for later.

5. Use All sections or Leave for another time to return to the section list. Save contribution before closing the page if you want the current answer stored.

The 34 optional questions gather preparation material. They do not complete a clinical assessment, produce new crisis instructions, authorize restrictions, or create an approved Therapeutic Support Plan.

Keep the individual voice distinct

Within a question, an authorized supporter may help the individual contribute and may separately record the team's observations.

Illustrative screen mockups with fictional examples. Excerpts show relevant controls; scroll in the app to see the complete screen.

1. Select My perspective when recording the individual's answer. Use Read to me, available choices, My words and Dictate as helpful. No choice is selected in advance.

2. Open For my helper if assistance was provided. Choose how the answer was recorded. Enter what the person actually expressed rather than guessing an answer.

3. For a supporter's separate account, choose Team observations. Describe what was observed and clearly identify any interpretation or uncertainty. An individual account does not offer a team-observation mode.

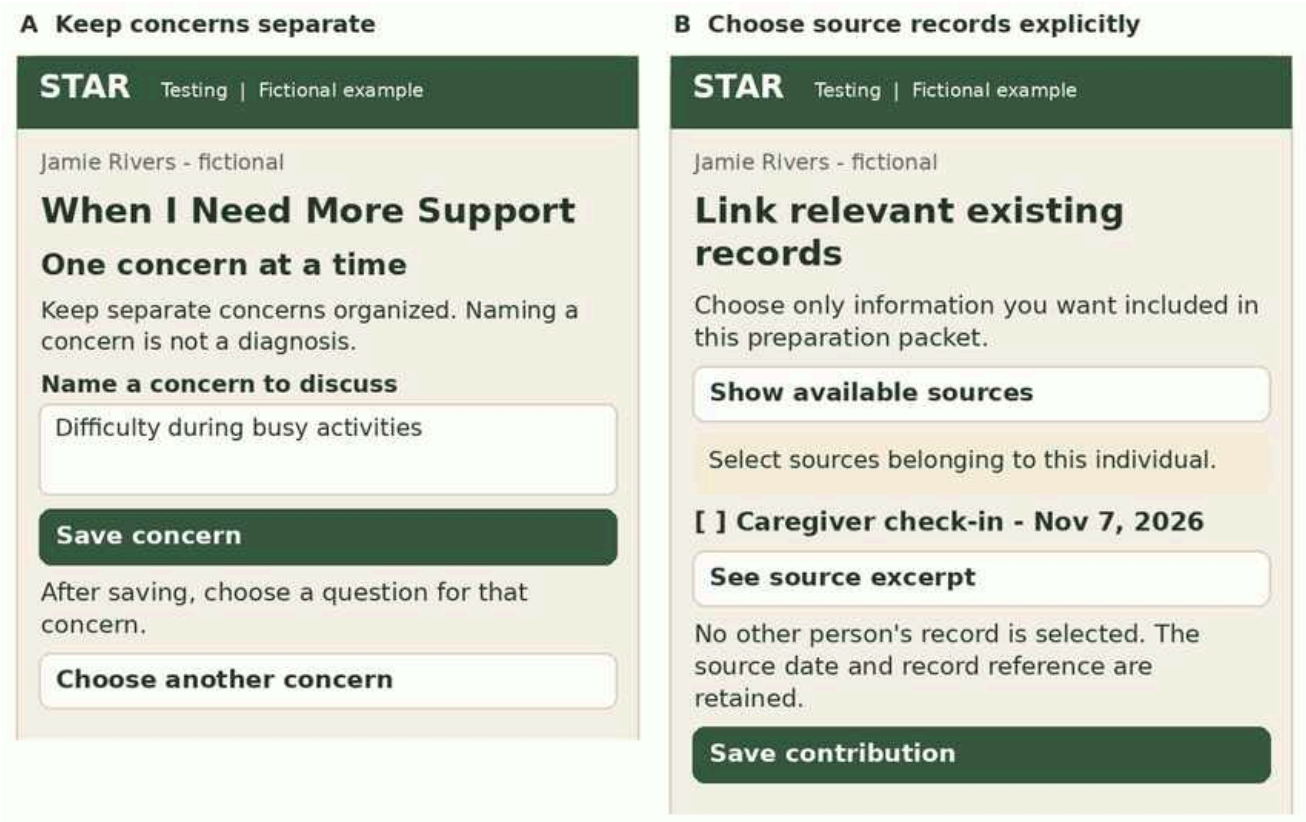

4. Tap Save contribution and wait for confirmation. Saving adds a dated entry with the perspective, actual recorder and assistance. It does not change a communication guide or formal plan.

5. Expand the saved-contributions area beneath the question to read earlier entries. Add a new contribution to clarify or correct an earlier entry; original words remain intact.

Unsaved words and choices stay on this page while moving between questions. They are not a cross-device draft. Save each contribution before leaving, signing out, refreshing, or changing devices.

Organize concerns and link evidence

Section 4 keeps each concern separate. Existing communication and check-in information can be selected as source material instead of rewritten.

Illustrative screen mockups with fictional examples. Excerpts show relevant controls; scroll in the app to see the complete screen.

1. In When I Need More Support, select an existing concern or enter a short name under Name a concern to discuss. Tap Save concern. Naming a concern is not a diagnosis.

2. Answer the questions for that concern. Use Choose another concern to work on a different issue. Save each contribution to preserve its connection to the selected concern.

3. When a question offers Link relevant existing records, expand it and tap Show available sources. Sources appear only when explicitly connected to this individual.

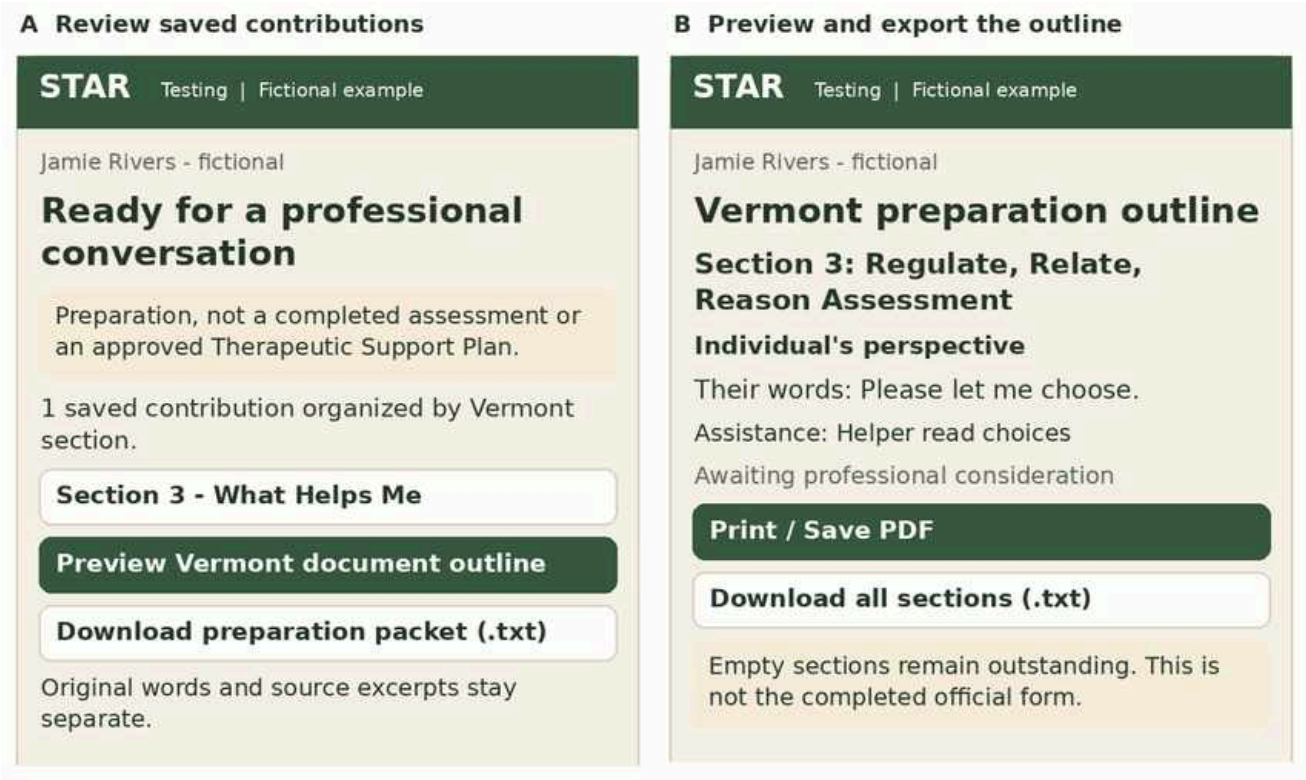

4. Use See source excerpt to read the information. Select the checkbox only for records you want included, up to ten sources per contribution. Available lists show recent records, not every historical record.

5. Tap Save contribution to save your answer and selected source excerpts together. Source dates and references remain separate from your own words.

Unassigned legacy check-ins and another person's records are excluded. The check-in excerpt includes recorded caregiver, physical and behavior notes and sleep hours when available; it is not an export of the whole check-in. If sources do not load, the contribution can still be saved without them.

Review and share the preparation packet

Individuals, caregivers and case managers can use saved contributions to prepare for a conversation with the chosen qualified professional.

Illustrative screen mockups with fictional examples. Excerpts show relevant controls; scroll in the app to see the complete screen.

1. Open Review & share. Expand a section to read its saved contributions, dates, perspectives, recorder information, assistance and linked source excerpts.

2. Tap Preview Vermont document outline. The same saved contributions appear beside their Vermont sections. Blank sections remain outstanding; a saved contribution does not mean a section is professionally complete.

3. To print, select Print / Save PDF from the outline. Choose the printer, paper options and page range in your browser's print dialog. Select Save as PDF if your device provides it.

4. To save text, select Download preparation packet (.txt) in Review & share, or Download all sections (.txt) in the outline. Open the download in your device's Files or Downloads app.

5. Review the packet before sharing it through your team's agreed process. Downloading or printing does not automatically email, post, submit or send it to anyone.

The packet is clearly labeled preparation material. It is not the completed official Vermont form, a professional evaluation, or an approved plan. Daily supports points to existing team documents and How I Communicate; preparation answers do not become active care instructions.

Save access and device help

When an answer is not visible

1. Confirm the correct testing site and signed-in account. Check Individual again; each person's records are separate.

2. For communication answers, use For my team and expand Individual answers & team observations. For preparation answers, use Review & share or the saved-contributions area under the original question.

3. If no individual is linked, ask the group administrator to check the individual's profile and team role. Do not create a second personal profile just to bypass the message.

When a save is not confirmed

Keep the page open. Use Save again to check or retry the original entry. The app reuses the same submission identifier and checks for an existing saved record. Wait for confirmation before leaving or re-entering the answer. Do not repeatedly create new submissions. If the sign-in expired, retain your words and sign back in before continuing.

Read aloud and dictation

Tap Read to me and make sure the device volume is audible and the browser is permitted to play audio. For Dictate, allow microphone access if the device asks, speak, then stop dictation and check the text. If browser dictation is unavailable, tap the text box and use the microphone on the phone or tablet keyboard, or type. Read aloud and dictation are different functions; neither saves the answer until Save is selected.

What is and is not professionally completed

Team review of a communication observation does not establish formal therapeutic approval. A preparation packet supports a professional conversation. Formal consultant authoring, credential verification, consent, signatures and applicable committee approvals are separate processes, not functions completed by saving in these tools.

Before giving the device to someone else

Check the individual's name, explain that participation is optional, and offer help without choosing answers for them. Save wanted contributions, then leave the feature or sign out as appropriate. On a shared device, the record identifies the actual signed-in account rather than pretending the individual signed in.

For the testing release, confirm microphone permissions, audible read-aloud and print/PDF output on the actual device you intend to use. Use fictional test answers for this check.

Reference | Resources and troubleshooting

For all roles. Resources and official Vermont forms are available through the app's Resource/Feature Guide.

Find Vermont forms and role guides

Open Resources from the menu or the Resources card in Docs. Expand the section you need.

- ARIS payroll forms and reimbursement links to caregiver timesheets, the approved LRI timesheet, reimbursement forms, and submission instructions.
- Vermont resource phone numbers includes ARIS, DAIL, DDSD, and Vermont Family Network.
- Vermont job roles and qualifications links to state guidance for case managers, QDDPs, direct support professionals, and respite providers.
- Who's on your team? is a printable contact worksheet. Add contacts for the roles your team uses, including direct support, backup coverage, respite, and case manager supervision. Use the print option to keep a copy of temporary entries.
- In Team tools and settings, expand Vermont Critical Incident Reporting for the DAIL portal and DDSD instructions. Use your team's reporting process and the state portal for official submission.

When something looks wrong

- Missing individual or caregiver. Check the active group and the account's role. Tell the admin which picker you opened and which person you expected to see.
- Missing check-in question. Ask the admin to check the selected caregiver's saved assignment and the ISA measure link if applicable.
- Missing report entry. Check the date range, individual, submission status, and the original answer before creating a duplicate entry.

For help within STAR, open Menu, then Resources, and expand the topic you need.

Screenshot requests | Finish the illustrated handbook

Existing screenshots were preserved. The items below are the gaps to capture from STAR TEST using fictional people and sample codes. Exact screens may differ in the live version.

Batch 1 — onboarding (please send these first)

- S01 — STAR landing/sign-in screen (existing test screenshot is available; live wording would be helpful for comparison).
- S02 — Email confirmation / what users see after clicking the verification link (existing email screenshot is available).
- S03 — Choose Your Role screen, with all choices visible.
- S04 — Set Up Your Group, Join Group and Enter invite code; and Group Created with Copy Code (hide or use a fictional code).
- S05 — The first screen after joining and the Profile / Save Profile result (existing profile screenshot is available).

DRAFT

Batch 2 — administrator and caregiver

- S06 — Admin team roster and where new team members are confirmed, including any case-manager role/permissions.
- S07 — Customize Caregiver Check-in screen with selection and both Save controls; My STAR observations awaiting review.
- S08 — Reports with dated list, monthly summary, and custom range filters showing one fictional person.
- S09 — Caregiver Home / Quick Actions after login.
- S10–S11 — Support Provided and Location selections, plus how the submitted entry appears in Reports.

Batch 3 — case manager and individual

- S12 — Case-manager onboarding / permissions and first dashboard, if a distinct view exists. If not, show the actual approved route.
- S13 — ISA Draft and Active cards together, plus an outcome progress report for one fictional individual.
- S14 — My Month and report date filters as a case manager would use them.
- Optional refresh: individual My STAR saved responses and team Home/Chat alert badges, especially if the test UI has changed.

How to capture: Send full-screen or overlapping partial screenshots; overlapping pieces can be combined for the handbook. Avoid showing passwords, real invite codes, real names, or personal health information. Send Batch 1 first.

DRAFT

ADMINISTRATOR GUIDE | Custom Caregiver Check-In Setup

This section documents the administrator configuration screen in the STAR UVM test environment. It is not the daily check-in form completed by caregivers.

Purpose and access

Administrators choose which tracking questions appear for their group. The standard caregiver check-in remains in place unless the group intentionally saves a custom setup. Existing historical check-ins are not changed by updating the setup.

Step-by-step setup

1. Open setup

From the administrator Home screen, select “Edit caregiver check-in” to open Custom Caregiver Check-In Setup.

2. Choose whose check-in to customize

Under “Who is this check-in for?”, choose a registered individual. Keep “Group defaults (all caregivers)” to configure the group-wide selection, or select a registered caregiver to customize that caregiver’s questions for the chosen individual. Only administrators can edit these settings.

3. Understand the always-available notes

Gold Star – Important Observations is a short note (up to 180 characters) for a meaningful moment, accomplishment, or observation. It appears with its date in the monthly team letter and is separate from ISA progress. Education & Learning – Skill Development Note (up to 180 characters) records what was practiced or learned. Both notes are available regardless of additional question selections.

4. Select relevant categories and measures

Check the category and individual questions that the team needs to track. Examples shown in the test screen include Behavior / Mental Health, Physical Health, Daily Living, Community, Vocational, and Education & Learning – Detailed Tracking. Select questions that are useful for the individual’s support and reporting needs; not every available measure needs to be selected.

5. Preview before saving

Use “Preview Caregiver Check-In” to inspect the caregiver-facing selection where available. Confirm that the intended individual and caregiver settings are selected.

6. Save the configuration

Select “Save Caregiver Setup”. Confirm the saved state before leaving the page. The screen states that changes affect the custom workflow and do not alter historical check-ins.

What can be selected?

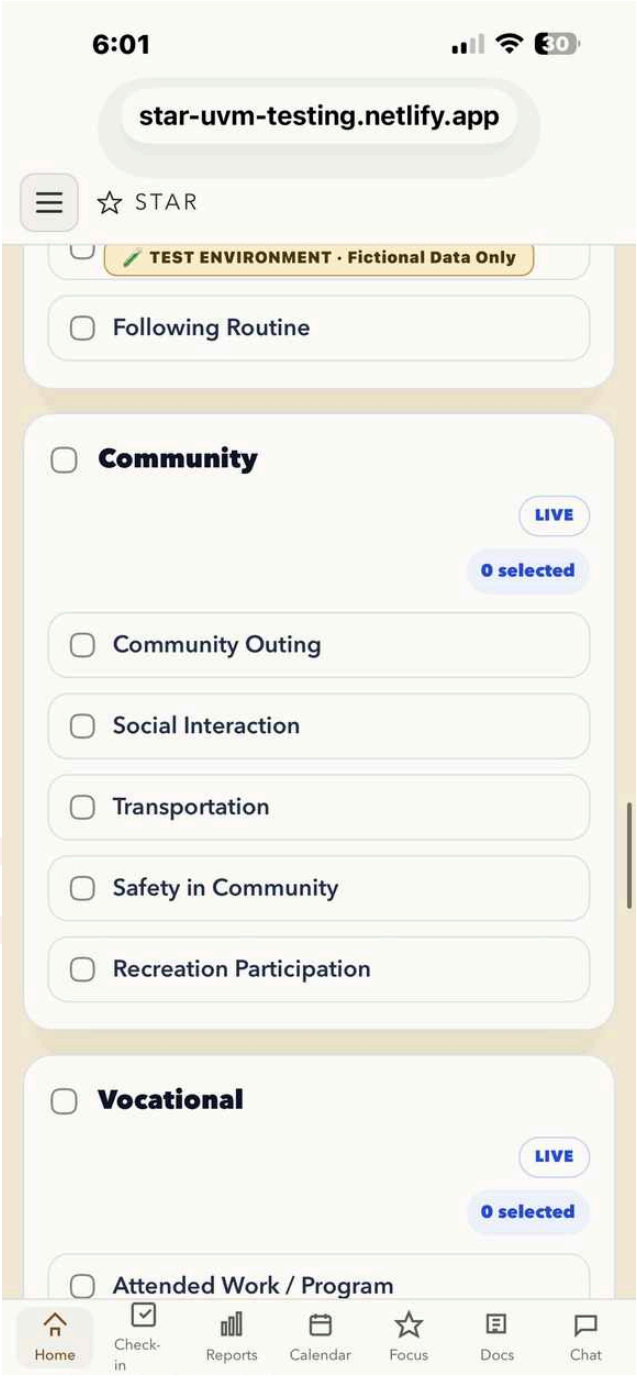

- **Behavior / Mental Health:** Emotional regulation; behavioral safety; flexibility and tolerance; social/behavioral response; mental health/internal state, including observable signs and PRN-use tracking.
- **Physical Health:** Sleep, appetite, PRN use, energy level, pain/discomfort, illness symptoms, and menstrual cycle tracking.
- **Community:** Community outing, social interaction, transportation, safety in community, and recreation participation.
- **Vocational:** Attended work/program, task completion, prompting needed, workplace behavior, and independence.
- **Education & Learning – Detailed Tracking:** Functional communication; peer interaction from 1:1 toward small group; self-regulation; daily living skills; task engagement; community and vocational participation.

The screenshots also show Daily Living and additional question options. This list summarizes the visible examples rather than claiming to reproduce every item in the application.

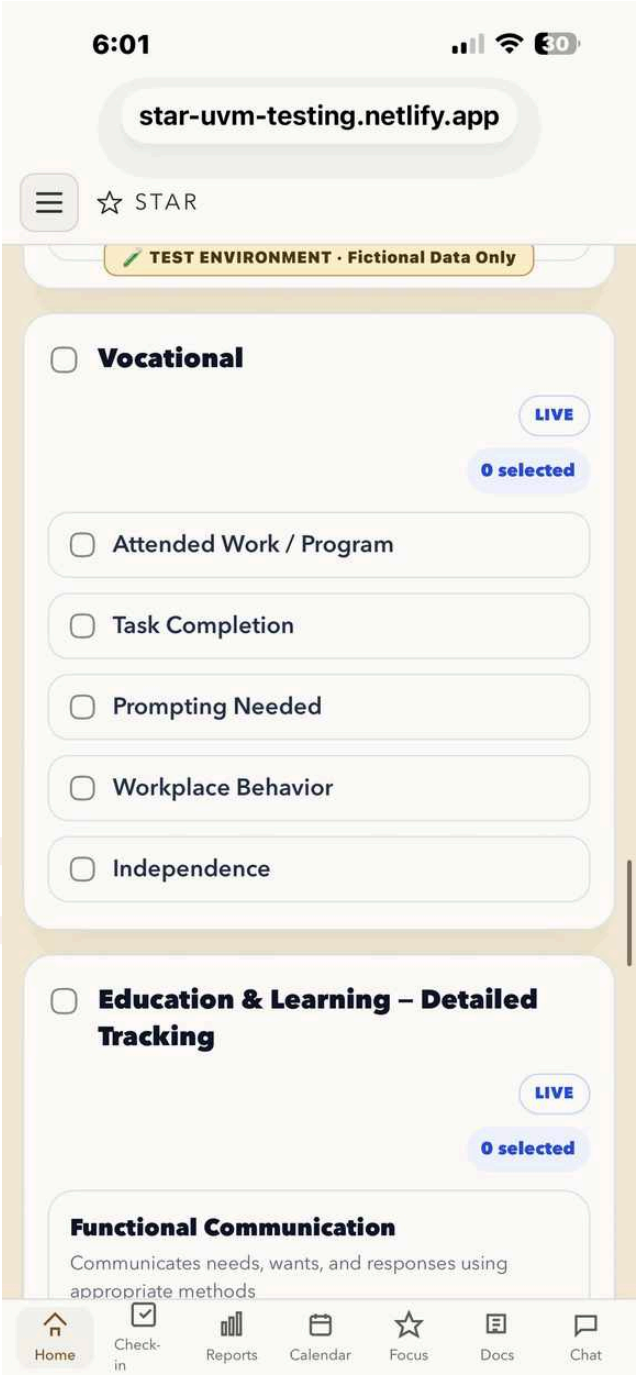

Screenshots from the test environment

Community selections

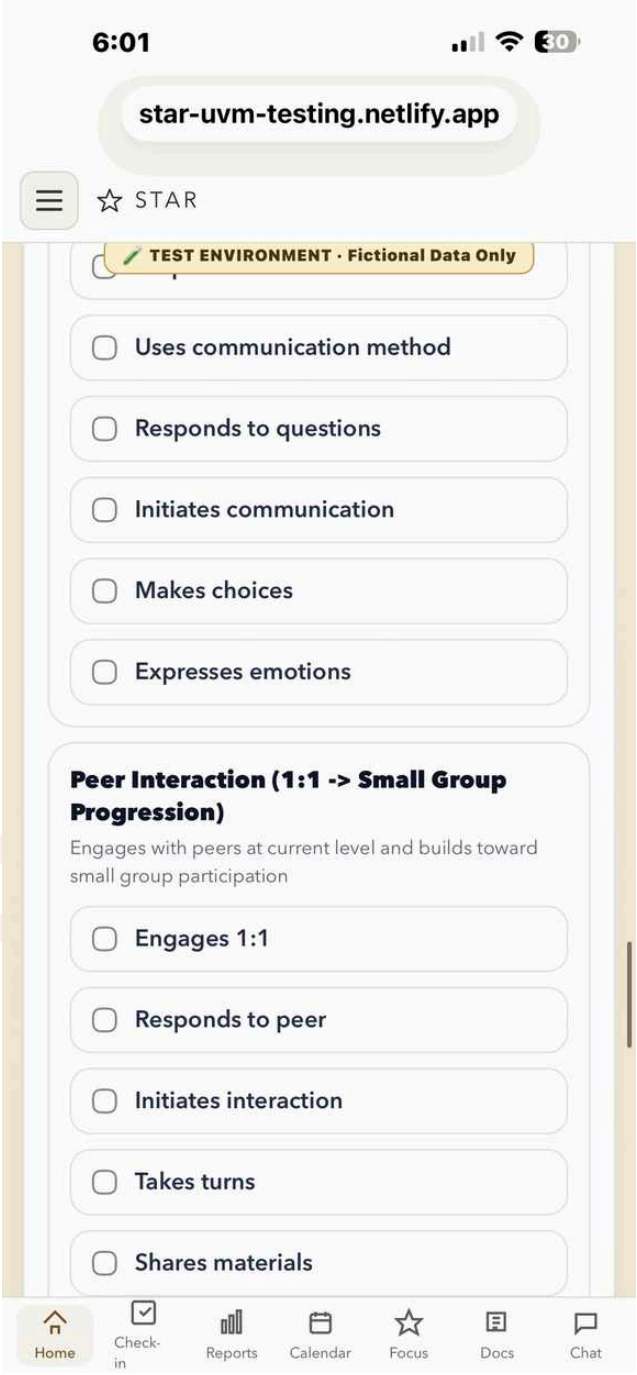

DRAFT

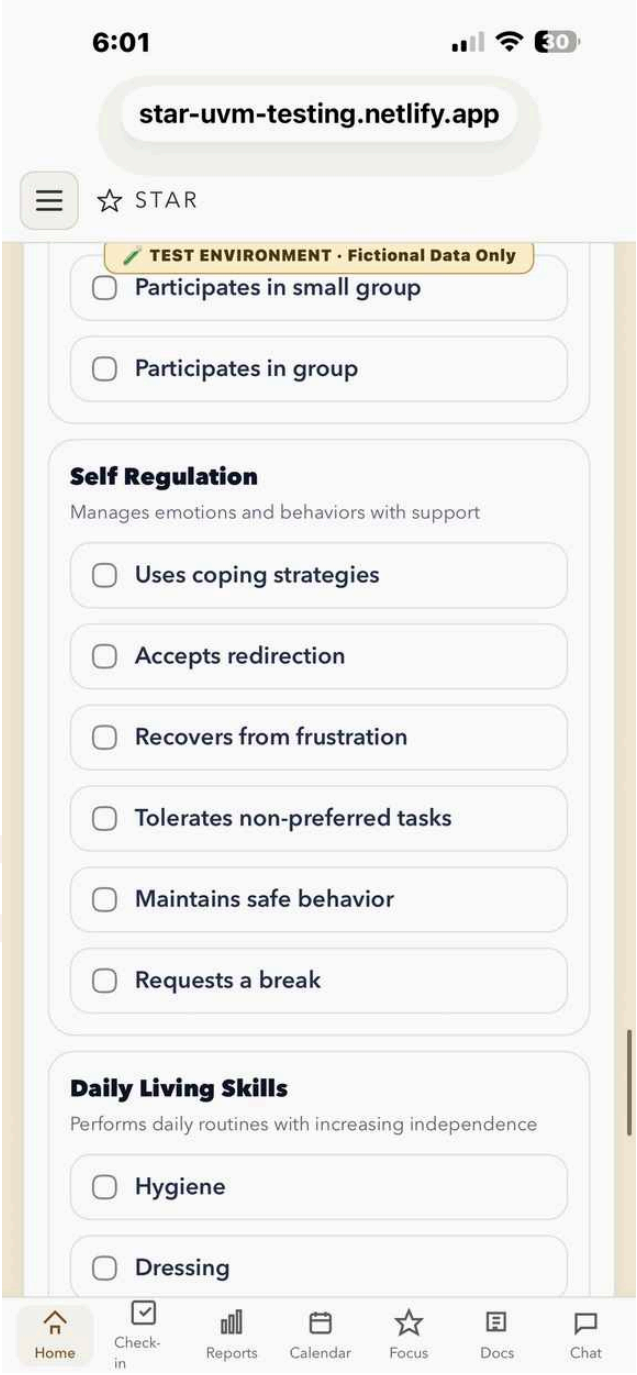

Vocational selections and education section

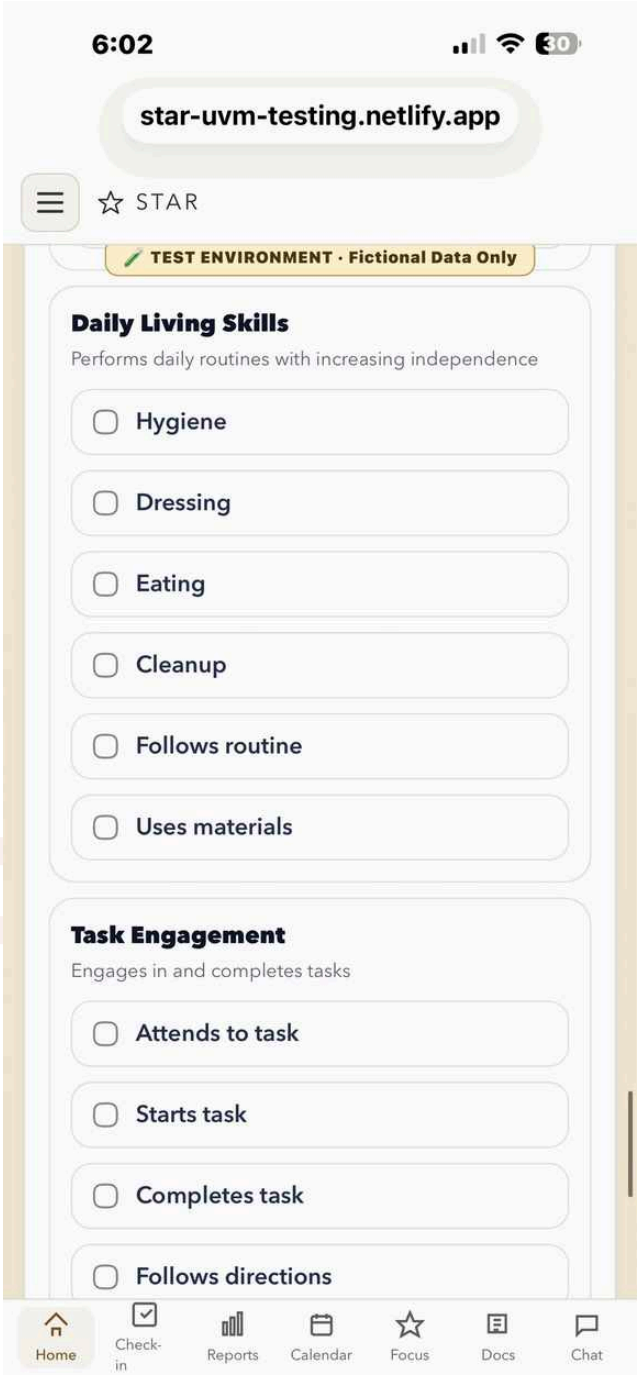

Functional communication and peer interaction

Self-regulation and daily living skills

Daily living skills and task engagement

Community/vocational participation and Save Caregiver Setup

Administrator checklist

- Confirm the correct individual and caregiver (or group defaults).
- Select only the tracking questions the team will actually use.
- Preview the check-in and save the setup.
- Explain selected questions to caregivers before expecting consistent documentation.
- Review the caregiver report after a sample check-in to verify the intended data appears.

Reports | Illustrated walkthroughs

The following reporting walkthroughs use screenshots from the STAR UVM testing environment. Names and entries are fictional. Screenshots are selected to illustrate the controls and results without reproducing every screen.

Reports | Caregiver Check-ins

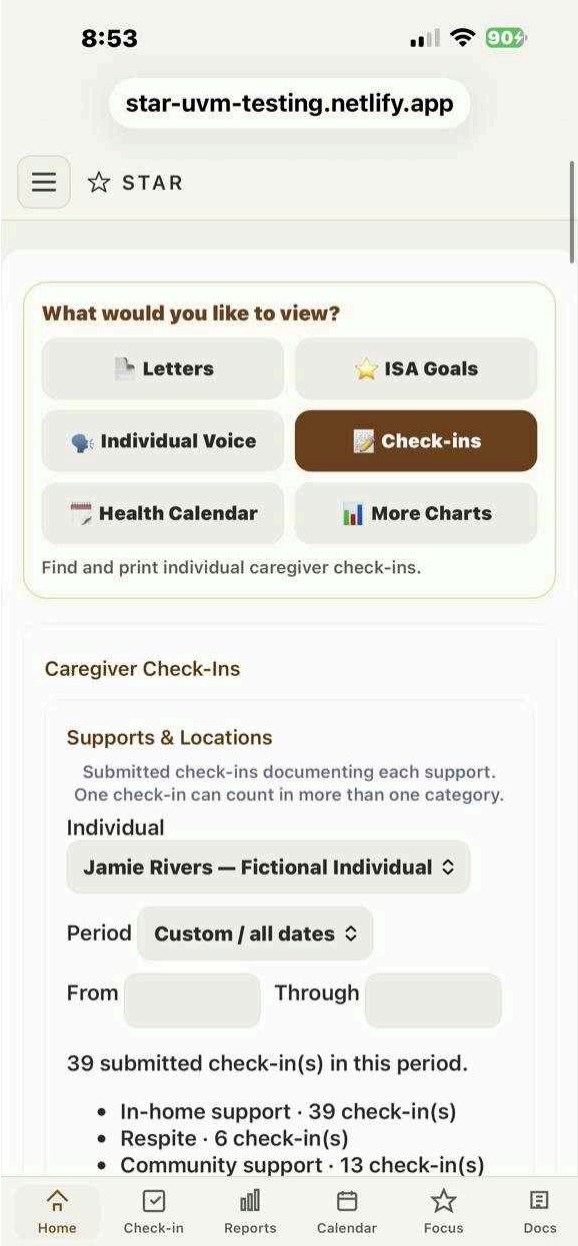

1. Open Reports and select Check-ins. Choose the individual whose records you need to review.

2. Select a period or enter From and Through dates. The list shows submitted check-ins for that date range.

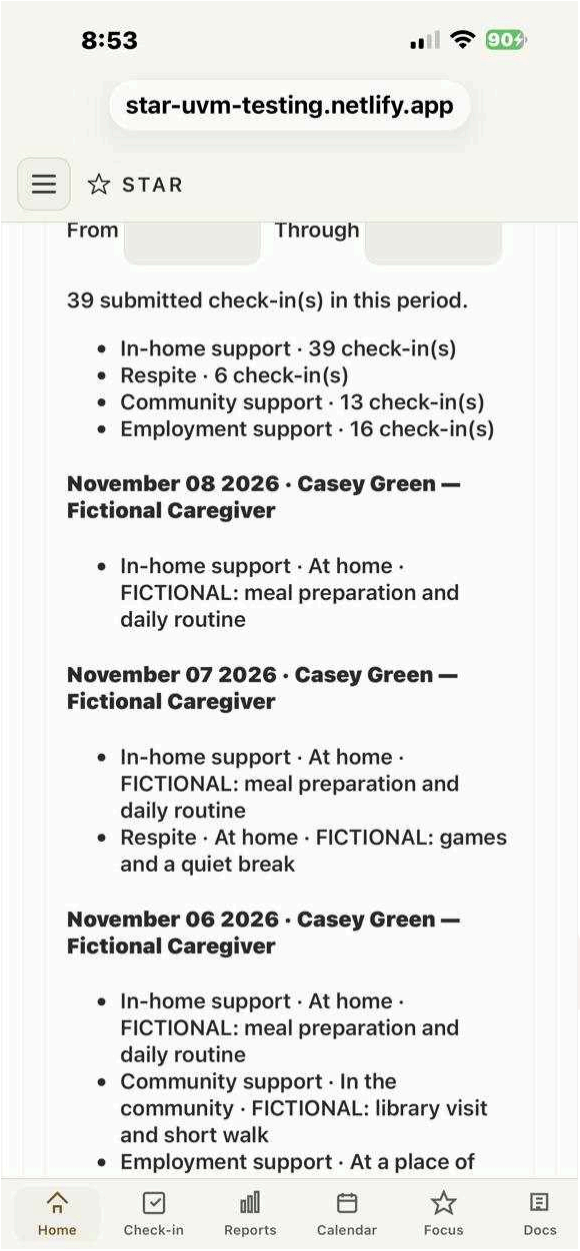

3. Review Supports & Locations totals. One check-in can document more than one support category; category counts are not necessarily distinct check-ins.

4. Scroll through dated entries to see caregiver, support type, location and recorded activity. Use these dated details when reviewing service documentation or preparing a team meeting.

DRAFT

Check-ins report: individual, date filters and support counts

Dated fictional caregiver entries with support types and locations

Reports | Letters

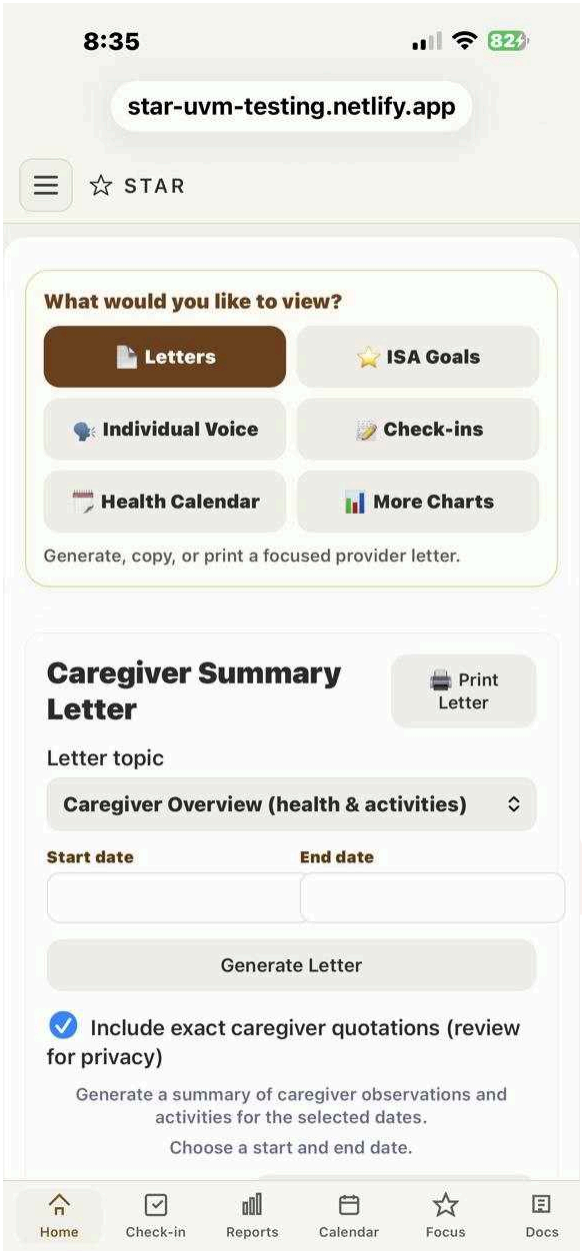

1. Open Reports and select Letters. Choose the letter topic: Caregiver Overview, ISA Outcome Progress, My STAR Individual Voice, combined topics, or all three.

2. Choose the start and end dates. Select whether to include exact caregiver quotations; review quotations for privacy and accuracy before sharing.

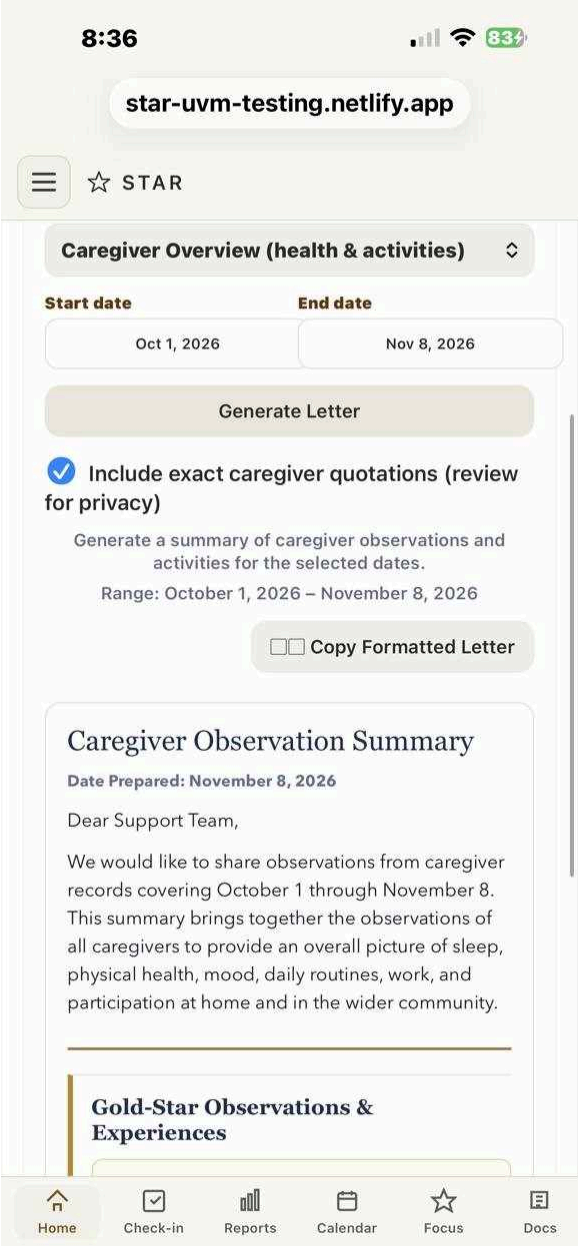

3. Select Generate Letter and read the generated summary, including gold-star observations and record coverage. A statement that no records were available means the selected reporting source did not return entries for that period.

4. Use Copy Formatted Letter or Print Letter to share the reviewed report with the appropriate support team or provider.

Important: The screenshot shows an empty-record example; it does not demonstrate a completed report populated with caregiver entries.

Letters: topic and date selection

Generated caregiver observation summary

Reports | ISA Outcome Progress

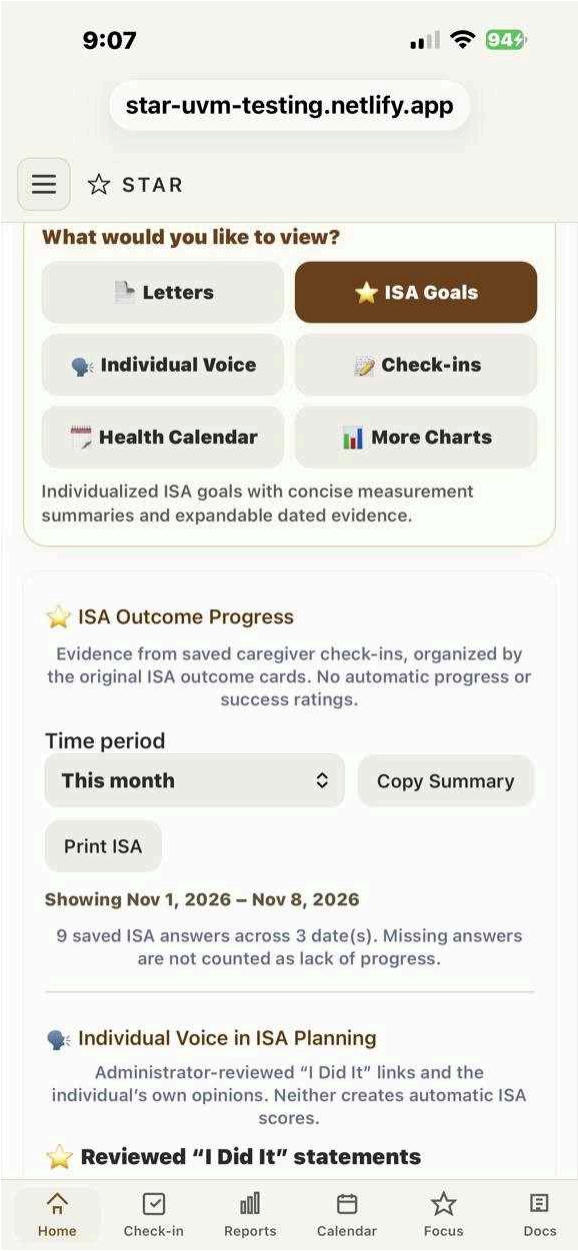

1. Open Reports and select ISA Goals. Select a reporting period such as This Month or Last 3 Months.

2. Review saved ISA answers and dates, then read administrator-reviewed “I Did It” statements and the individual’s own words.

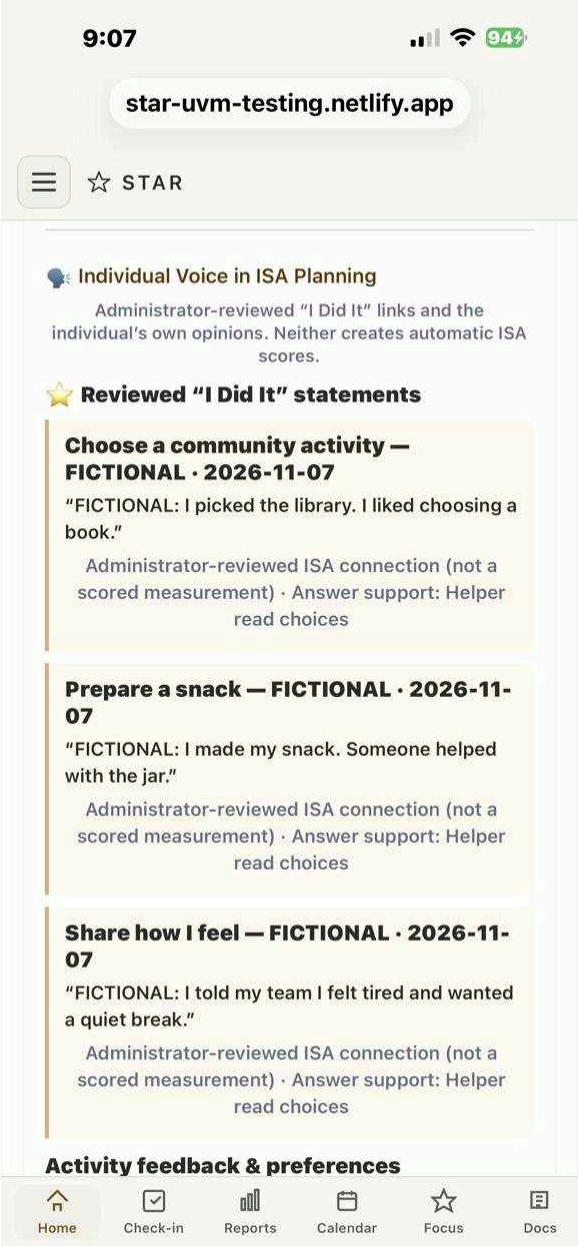

3. Review activity feedback and preferences, including what the individual liked or did not like. Expand outcome sections to inspect dated answers.

4. Use Copy Summary or Print ISA for quarterly reviews and team discussions. Check that the selected individual and period are correct before sharing.

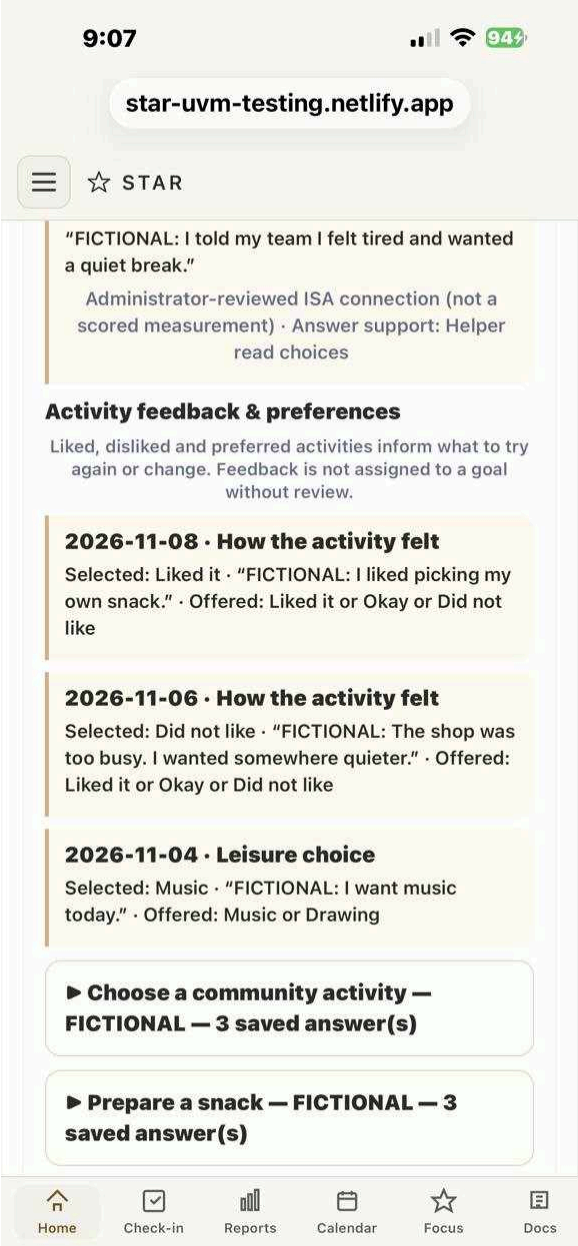

Important: STAR presents evidence; it does not automatically score ISA achievement. The supplied screenshots show a discrepancy between a three-month empty view and a current-month populated view. Verify that report filtering is working before relying on a longer-period summary.

ISA report: reporting period and saved answer count

Administrator-reviewed "I Did It" statements

Activity preferences and expandable outcome evidence

Reports | Health Calendar

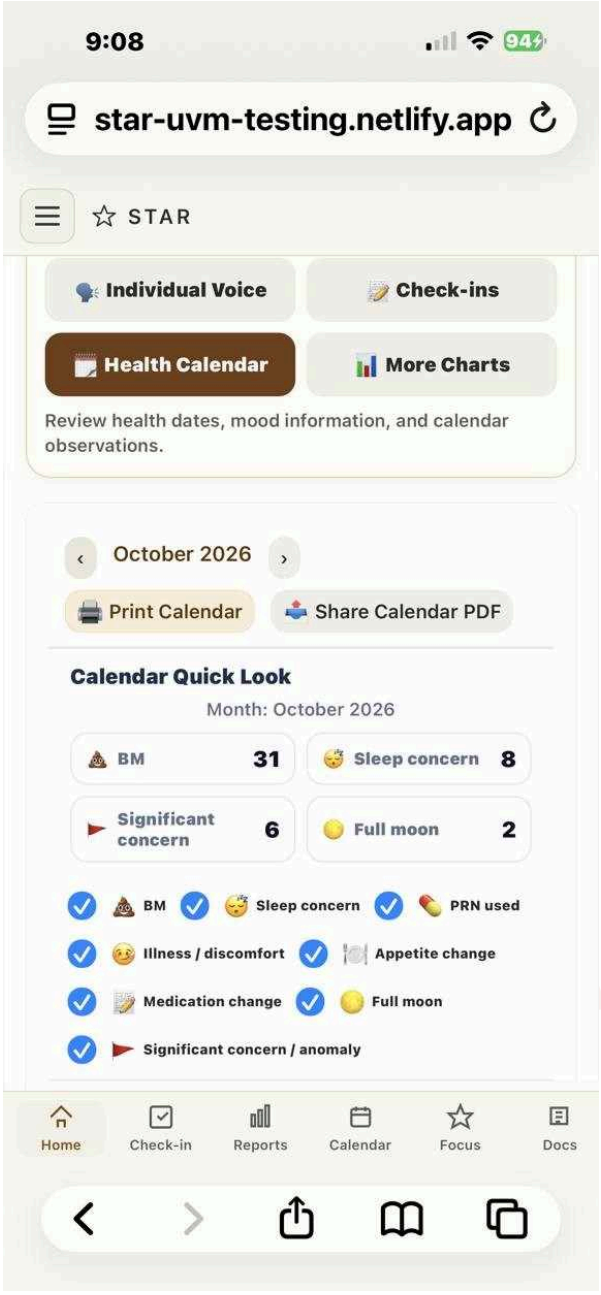

1. Open Reports and select Health Calendar. Use the month arrows to move between months.

2. Review Calendar Quick Look for monthly counts such as bowel movements, sleep concerns and significant concerns.

3. Use the checkboxes to show or hide BM, sleep concerns, PRN use, illness/discomfort, appetite change, medication change, full moon and significant concerns.

4. Read individual dates for engagement and caregiver observations. Select Print Calendar or Share Calendar PDF when appropriate.

Important: Calendar events are observations, not evidence of causation. For example, a full moon appearing near a sleep concern does not establish that it caused the concern.

Health Calendar: monthly quick look and category filters

Calendar grid showing dated fictional observations

Reporting sections still awaiting screenshots

Reports → Individual Voice and Reports → More Charts have not yet been documented with their own screenshot walkthroughs in this update.

DRAFT

Remaining handbook work — editorial checklist

- Confirm the role-switcher screenshots for Administrator, Caregiver, and Case Manager, including which buttons are active versus preview-only.
- Add the current Reports landing page and each of its six areas: Letters, ISA Goals, Individual Voice, Check-ins, Health Calendar (existing monthly calendar), and More Charts.
- Capture the finalized provider letter generated from fictional data; explain the conversational narrative and the separate sections for medication, sleep, health, mood, community, and notable events.
- Add the final ISA Whole-Person View with its selected outcome, date filters, graph, caregiver observations, individual voice, supports/locations, and team review; verify it is actually available in the integrated app.
- Complete screenshots marked SCREENSHOT NEEDED, especially team roles/permissions, caregiver check-in assignments, supports and locations, and case-manager access.
- Walk through My STAR Moments from caregiver photo submission to the individual's response and where it appears in reporting.
- Check Help Now and Something Hurts alerts from the individual screen through team chat and notification badges.
- Proofread all navigation names against the deployed STAR TEST interface, and verify the live app differences before producing a live-user edition.

DRAFT
